APPLICATION TO TURFGRASS

The use of this product will provide plant nutrients as well as providing control of selected insect pests. MERIT 0.3 Plus Turf Fertilizer can be used for the control of soil inhabiting pests of turfgrass; for example northern & southern masked chafers, *Cyclocephala borealis*, *C. immaculata*, and/or *C. lurida*; Asiatic garden beetle, *Maladera castanea*; European chafer, *Rhizotrogus majalis*; Green June beetle, *Cotinus nitida*; May or June beetles, *Phyllophaga* spp.; Japanese beetle, *Popillia japonica*; Oriental beetle, *Anomala orientalis*; billbugs, *Sphenophorus* spp.; annual bluegrass weevil, *Listronotus maculicollis*; Black turfgrass ataenius, *Ataenius spretulus*; *Aphodius* spp.; crane flies, *Tipula* spp., and mole crickets, *Scapteriscus* spp. MERIT 0.3 Plus Turf Fertilizer can be used as directed on turfgrass; for example, in home lawns, business and office complexes, shopping complexes, multi-family residential complexes, golf courses, airports, cemeteries, parks, playgrounds, and athletic fields. MERIT 0.3 Plus Turf Fertilizer cannot be used on commercial sod farms.

APPLICATION RATES		
CROP	PEST	DOSAGE MERIT + TURF FERTILIZER
Turf Grasses	Billbugs Larvae of: <i>Aphodius</i> spp. Black turfgrass ataenius European chafer Japanese beetle	83 to 133 lb per acre or 2 to 3 lb per 1000 sq ft
	Annual bluegrass weevil Billbugs Crane flies Larvae of white grubs, for example: <i>Aphodius</i> sp. Asiatic garden beetle Black turfgrass ataenius European chafer	Green June beetle Japanese beetle Northern masked chafer Oriental beetle <i>Phyllophaga</i> spp. Southern masked chafer
	For optimum control, make application prior to egg hatch of the target pest. Be sure to read "APPLICATION EQUIPMENT" Section of this label.	
	Mole crickets Chinch bugs (suppression)	133 lb per acre or 3 lb per 1000 sq ft
	For suppression of chinch bugs, make application prior to the hatching of the first instar nymphs For optimum control of mole crickets, make application prior to or during the period of peak egg hatch. If application is not made prior to egg hatch, and adults or large nymphs are present and actively tunneling, then apply MERIT 0.3 Plus Turf Fertilizer in combination with a remedial insecticide to minimize damage to turf.	
	Consult your local State Agricultural Experiment Station or State Extension Turf Specialists for more specific information regarding timing of application.	
NOTE: For optimum control, irrigate if rainfall does not occur within 24 hours after application to move the active ingredient through the thatch. On golf courses, irrigate treated areas following application. Do not apply more than 133 lb (0.4 lb of active ingredient) per acre per year. Mow turf or lawn area until after irrigation or rainfall has occurred so that uniformity of application will not be affected.		

The active ingredient in MERIT 0.3 Plus Turf Fertilizer has sufficient residual activity so that applications can be made preceding the egg laying activity of the target pests. High levels of control can be achieved when applications are made preceding or during the egg laying period. The need for an application can be based on historical monitoring of the site, previous records or experiences, current season adult trapping or other methods. Optimum control will be achieved when applications are made prior to egg hatch of the target pest, followed by sufficient irrigation or rainfall to move the active ingredient through the thatch.

Do not apply when turfgrass areas are waterlogged or the soil is saturated with water. Adequate distribution of the active ingredient cannot be achieved when these conditions exist. The treated turf must be in such a condition that the rainfall or irrigation will penetrate vertically into the soil profile. Applications cannot exceed a total of 133 lb (0.4 lb of active ingredient) per acre per year.

APPLICATION TO ORNAMENTALS

MERIT 0.3 Plus Turf Fertilizer can be used as a broadcast application on ornamentals in commercial and residential landscapes, as well as on landscaped areas of golf courses and other recreational areas. This is a systemic product, with the active ingredient being absorbed by the roots and translocated upward within the plant. Optimum control will be achieved when applications are followed by sufficient mechanical incorporation, irrigation or rainfall to place the active ingredient into the soil. Make application prior to anticipated pest infestation to achieve optimum levels of control.

Applications of MERIT 0.3 Plus Turf Fertilizer cannot exceed a total of 133 lb (0.4 lb of active ingredient) per acre per year.

NOTE: Not for use in commercial greenhouses, or nurseries, or on sod farms.

APPLICATION RATES FOR USE ON ORNAMENTALS

<p>Apply as a broadcast treatment. Prior to application, remove black plastic or other weed barrier material that will not permit water permeability.</p> <p>NOTE: For optimum control, irrigate if rainfall does not occur, or incorporate mechanically, within 24 hours after application to move the active ingredient into soil.</p> <p>Refer to label sections on application equipment and spreader settings.</p>
