DIRECTIONS FOR USE (continued)

HOW TO USE

TO CONTROL	WHEN TO APPLY
GRUBS	Apply when grubs are present
MOLE CRICKETS	Apply when mole crickets are present
CUTWORMS SOD WEBWORMS	Mid-May through Mid-June
LAWNS	<p>How Much: See Spreader Settings</p> <p>Adjust spreader to the proper setting (see Spreader Settings). (ART)</p> <p>To be sure you cover the entire area uniformly, first treat the border of the lawn then fill in the center. Make parallel passes, walking at a steady pace to ensure even distribution of the granules. (ART)</p> <p>Water thoroughly after applying. (ART)</p>
FOR BEST RESULTS	<ul style="list-style-type: none"> • The best time to kill grubs is July through September, when they are young and actively feeding near the soil surface. • Water thoroughly within 24 hours after applying. • Do not mow until the granules are watered into the soil. • Avoid applying DYLOX Grub Control Insecticide to waterlogged areas, as this may decrease the product's effectiveness. • You may spread DYLOX Grub Control Insecticide over soil or mulch. If present, remove weed barrier before applying.

SIGNS OF DAMAGE TO LAWNS

GRUBS	White grubs cause extensive damage to lawns by feeding on grass roots. Grass turns yellow, then brown and dies. Grubs chew off roots so that the grass is easily pulled up in pieces with your hands. You can roll it back like a carpet to reveal the grubs. If patches of dead grass appeared in your lawn late last summer, check for grubs.
MOLE CRICKETS	Mole crickets often cause extensive damage by tunnelling through lawns. Some species also feed on roots. Tunnelling uproots the grass so it easily dries out. Lawns turn yellow, become thin, weedy and can eventually die.
SOD WEBWORMS AND CUTWORMS	Sod webworms and cutworms damage lawn by cutting blades of grass near the ground. Small brown patches will appear. Cutworms can also be seen in the lawn. Webworms nest down in the thatch layer, coming up to feed at night.
HOW IT WORKS	DYLOX Grub Control Insecticide is intended to be used when insects and grubs are present. After granules are watered in, insects are killed on contact. The active ingredient then degrades quickly.
