50 Pounds

For Use on Corn, Barley, and Many Other Whole Grains and Seeds in Storage

PYRENONE GRAIN PROTECTANT

Pyrenone Grain Protectant kills accessible stages of many grain insects, particularly rice weevils and granary weevils, and protects against any insects in the bron-bug group including flour beetles and grain beetles. One treatment is usually adequate for a full storage season.

Treated grains require only normal cleaning before processing for human food and may be fed to livestock.

100% of butylated butyl dimethylphenyl ether and 0.04% of

Directions of use: Avoid contact with skin. Wash thoroughly after using. Keep out of reach of children. Keep away from feed and foodstuffs.

DIRECTIONS FOR USE

Whole grains and seeds to be treated should be in condition for normal use. Treatment should be applied when the grain goes into storage and before serious infestation has developed.

HOW MUCH PYRENONE GRAIN PROTECTANT TO APPLY

Application of Pyrenone Grain Protectant to storage and bags should be made at the rate of 100 to 1000 pounds per 1000 bushels of grain. The Pyrenone Grain Protectant should be applied to the whole grain or seeds to provide even coverage.

Pyrenone Grain Protectant can be applied to a moving stream of grain in the usual or typical conveyor. Small lots of grain or seeds can be treated by hand with a shovel or other suitable equipment.

Pyrenone Grain Protectant on ear corn including snapped corn should be applied at the same rate specified above, and should be sufficiently well mixed with the corn to assume even distribution. One method is by dusting the protectant over alternate shallow layers of the corn.

Snapped, unshucked corn should be shucked before treatment which is necessary for the distribution of the Pyrenone Grain Protectant. The amount of ear corn that can be shucked is about 100 bushels per 1000 bushels of ear corn.

IMPORTANT: Be sure to read or obtain all directions

1. Avoid contact with skin. Wash thoroughly after using.

2. Keep out of reach of children.

3. Keep away from feed and foodstuffs.

Pyrenone Grain Protectant is a white crystalline solid. It is soluble in water and in many organic solvents. It is stable to heat and light. It is not flammable.

CAUTION

KEEP OUT OF REACH OF CHILDREN
