DIRECTIONS FOR USE

COMMERCIAL WOOD PRESERVATION: This product is suitable for commercial wood preservation to control against termites, wood destroying insects and decay fungi. This product is a 5% Pentachlorophenol solution in an AWPA P9, Type A Solvent, suitable for pressure or thermal treatment according to practices generally outlined in Commodity Standards of the American Wood Preservers' Association (AWPA) and Federal Specifications TT-W 570 and TT W 571. These practices include conditioning the wood by air seasoning, kiln drying, steaming or Boulton drying prior to treatment, followed by treatment in hot and cold baths of solution (thermal process) or pressure processes generally known as empty cell (Rueping or Lowry) treatment. The pressures, temperatures, times, minimum retentions and penetrations are specified by AWPA Commodity Standards.

WOOD PRESERVATION. For best results this product should be applied so as to effect maximum penetration into the wood and absorption especially at joints and wherever end grain exists. Open tank treatment or complete immersion of the wood in the solution is generally recommended for five minutes per inch of thickness. It should be noted that wood items for use in contact with ground such as fence posts, will need maximum protection. Extend the treating time 12 to 48 hours. If they cannot be dipped, apply several heavy brush coats. Fence posts to be properly treated should be free of bark, dry and well seasoned.

For the protection of wood against termites, powder preservatives and decay the treatment of wood prior to use is always to be recommended. Obtaining commercial preservative treated wood is the best assurance of thorough treatment. It is difficult to get deep penetration and distribution of the preservative to impart a very measurable degree of protection.

Where such treating is impractical as in the case of existing structure, two heavy brush applications of this product should be applied, cutting out and removing all decayed wood two feet beyond any visible evidence of decay. (In the case of termite control, this would be supplemental treatment to the trenching or soil poison use of the product.) All wood should be normally dry, and the framing or cutting completed before treatment.

NOTICE

Avoid contamination of feed or foodstuffs. Do not reuse container. Return to farm recycler or other safe place. Do not contaminate water by container equipment or disposal of waste and containers. Treated sawdust and other wood wastes should not come in contact with domestic animals or be used as mulch where it will come in contact with domestic animals.
