SPECIMEN LABEL

DOWPON

GRASS KILLER

50 LB.

THE DOW CHEMICAL COMPANY
 MIDLAND MICHIGAN 48640

DOWPON GRASS KILLER

For use on lawns, golf courses, tennis courts, and other areas where grass is desired. It kills weeds and grasses without harming the surrounding lawn. It is easy to apply and works quickly. For more information, contact your local dealer or write to The Dow Chemical Company, Midland, Michigan 48640.

DOWPON GRASS KILLER

This one really works

CAUTION
 Use only on areas of concern.

DOW CHEMICAL COMPANY

MIDLAND, MICHIGAN 48640

measuring scoop inside

LAWN RE-GROWTH ON LAWNS AND AREAS: Use dead vegetation if present. Wait two weeks for new grass growth, then spray thoroughly, using 1/2 pound DOWPON in 4 gallons of water per 1000 square feet. After 2 to 3 weeks, water at least 15 minutes each day for 1 week. Wait for 4-6 weeks to seed, plug or sow.

WARNING: To avoid injury to desirable plants, do not allow spray or spray drift containing DOWPON to contact foliage or roots of such plants, including lawns or other desirable turf. Do not use close to ornamentals or fruit trees other than apple and pear. DOWPON in the soil may inhibit seed germination and plant growth for 20 days or more, depending on dosage, soil type, temperature and rainfall. Accordingly, do not plant to garden and garden crops, delay planting for at least 20 days.

CAUTION: CAUSES IRRITATION OF SKIN, MAY CAUSE SEVERE IRRITATION. Avoid Contact with Skin, Eyes, or Clothing. In case of contact, flush eyes with water for at least 15 minutes and get medical attention. For skin, remove grossly contaminated clothing and wash skin with plenty of water. Wash clothing before re-use. Keep Out of Reach of Children.

NOTICE: Seller warrants that the product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with directions, under usual conditions of use, but neither this warranty nor any other warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE, express or implied, extends to the use of this product contrary to label instructions, or under abnormal conditions, or under conditions not reasonably foreseeable to seller, and buyer assumes the risk of any such use.

DOWPON

Control perennial grasses such as
such as watergrass, annual bluegrass,
Bermudagrass, Paspalum
Paspalum, Paspalum
Can be applied with sprayer, sprinker

GENERAL DIRECTIONS - MIXING: V
fuls of DOWPON. Fill sprayer or sprinker
of DOWPON. Stir until dissolved, then

When to Apply: Apply spray when
foliage thoroughly to the point of re-

GENERAL GRASS CONTROL: Over-
foot. Apply with sprayer or hose pro-
the 4 scoops (2 1/2 ounces) of DOWPON
pump sprayer. With a hose proportion-
part of water and apply to wet or
gallon of water and apply to wet or
established lawn tracks using 2 scoops
a pump-up sprayer. Do not walk the
less than 4 years old.

WOOD-GRASS CONTROL IN BUCKING
young stems of annual bluegrass and
or newly transplanted areas. (2) 10
to 7 days before applying DOWPON. (3)
(4) Apply to last portion of wood gr-
illage on a light rain would do. (5) 1
a few min. A watering can is used
per 3 quarts of spray. Apply as directed
to evenly distribute no more than 2
vary, depending on type of sprayer
square foot.

phragmites after all shoots have emerged and are 2 to 3 feet tall. Fall treatment of cattails during catkin development also is effective. Re-treat as needed to control regrowth and new seedlings. Where control of grasses plus broadleaf weeds is desired, use DOWPON as a tank mix combination with FORMULA 40[®], KURON[®] or ESTERON[®] herbicides. Do not use combination sprays containing 2,4,5-T on ditch banks, around the home or recreational areas. Consult label direction and precautions for these products before using.

Seedling grasses: To control giant foxtail and other grasses in fence rows and other non-crop areas, use 10 pounds of DOWPON in 100 gallons of water and spray to thoroughly wet prior to heading. The same spray mixture can be used to spot-treat established grass infestations. Re-treat as needed.

Preplant Treatment of Conifer Forest Planting Sites: To control perennial grasses, use 10 to 15 pounds of DOWPON plus 1 to 4 pints of an agricultural surfactant per acre in enough water for thorough spray coverage. The higher rates of both DOWPON and surfactant are suggested for drier conditions. To control annual grass seedlings, use 4 to 5 pounds of DOWPON plus 1 to 1 pint of an agricultural surfactant per acre. Apply sprays in the spring when soil moisture is adequate for good plant growth and grasses are growing vigorously. Treat perennial grasses before seed heads develop and annual grasses no later than early tillering stage. Fall treatment of perennial grasses is effective if plants are growing well. Where control of grasses plus broadleaf weeds or woody plants is desired, use DOWPON as a tank mix combination with ESTERON[®] 99[®] Concentrate, ESTERON 245 or KURON herbicides. Consult label directions and precautions for these products before using. Wait at least two weeks after spraying before planting conifer seedlings in treated areas.

CROPLAND APPLICATION

PRE-PLANTING TREATMENTS: Apply DOWPON as a spray using it in enough water for good coverage. A waiting period between spraying and planting of crops susceptible to DOWPON must be provided to allow time for the chemical to decompose. Rate of decomposition proceeds most rapidly in warm moist soil. The waiting periods recommended between treating and planting of the various crops are adequate under most conditions. However, if the treated soil remains unusually cold or dry, decomposition will be slower and more time will be required before certain crops can be planted without the risk of some injury. Do not graze livestock on treated areas before plowing or disking.

1. Spring treatment of johnsongrass: Use on land to be planted to cotton, soybeans, corn or sorghum. Apply 5 to 7 pounds of DOWPON per acre as a foliage spray in the spring when johnsongrass is 8 to 12 inches tall and growing well. After spraying wait 3 days then plow or deep disk. One or more additional diskings prior to planting are suggested. Cotton can be planted without further delay. For corn or soybeans, wait at least 30 days after plowing before planting. With sorghum, wait at least 2 to 3 weeks after plowing or deep tillage before planting. If soil remains unusually dry after plowing or deep disking a longer waiting period may be needed before planting soybeans, corn or sorghum to avoid crop injury. Under such conditions delay planting these crops at least 5 days after receiving a minimum of 0.5 inch rainfall.

2. Spring treatment of quackgrass: Early spring application of 8 pounds of DOWPON per acre can reduce quackgrass on land to be planted to sugar beets, beans, corn and potatoes about 4 to 5 weeks later. Spray when grass is 4 to 6 inches tall and growing well. After spraying, wait at least 4 days before plowing down, and another 4 to 5 weeks before planting crops susceptible to DOWPON. If soil is unusually dry a longer waiting period will be necessary to avoid crop injury.

3. Fall treatment of quackgrass: Use 15 pounds of DOWPON per acre on land to be planted to sugar beets, beans, corn and potatoes, the following spring. Apply

Make two applications one to two weeks apart to control cattails and grasses such as phragmites, paragrass and cynodogon. DOWPON can be used with ESTERON products, KURON or FORMULA 40 for over-all control of grasses, cattails, weeds and woody plants. See these product labels for detailed use directions. Do not graze livestock on treated area.

FIELD CORN: Early Postemergence: To control seedlings of annual grasses such as green, yellow, and giant foxtail and of annual broadleaf weeds such as lambsquarters, pigweed and wild mustard use 1/2 pound of DOWPON plus 1 to 2 pounds of Atrazine 80 percent wettable powder plus 1 to 2 gallons of emulsifiable crop oil per acre as a tank mix combination with water to make 10 to 20 gallons total spray. Apply as an overall spray when weeds and grass are less than 1 1/2 inches tall and corn is in the spike to 4 ear stage. Prepare the spray by dissolving DOWPON in the required amount of water contained in a spray tank. Using a convenient container, make a thin slurry of Atrazine 80 percent wettable powder in water, thoroughly wetting the Atrazine, and add to the solution of DOWPON. Add the oil last. Provide continuous agitation in the spray tank during mixing, holding, and spraying operations to keep the spray uniformly mixed.

COTTON: Spot treatment for perennial grasses such as johnsongrass and bermudagrass: Use 1 pound of DOWPON in 10 gallons of water and spray to wet all grass foliage. Spray after the grass has developed good foliage and is growing vigorously. Retreat as needed to control escaped plants. An eradication program may take up to three applications during a season. Cotton plants wet with spray are usually injured, but adjacent plants are not seriously affected. Control new seedlings with other preplant or preemergence herbicides.

Lay-by spray in cotton to control annual grasses in western irrigated areas: Use 5 pounds of DOWPON in 50 gallons of water per acre. Cover entire soil area with a directed spray which wets grass without wetting cotton. Spray after last cultivation when grass is up but still small.

FLAX: To control pigeon grass or green, yellow and giant foxtails in flax, use 1 pound of DOWPON per acre in 5 to 10 gallons of water when flax is 1 to 6 inches tall. For best results, use when the young grass seedlings are less than 2 inches tall and growing actively. Do not expect rapid grass kill. **NOTE:** To avoid injury to flax, follow application directions carefully and do not exceed stated dosage. MCP or 2,4-D can be used with DOWPON where broad leaved weed control is desired.

POTATOES: To control seedling grasses: Use 3 pounds of DOWPON per acre in enough water to wet the grass evenly. Apply before emergence of the potatoes when grass plants are 1/2 to 1 inch tall. This application can be a combination spray with PREMERGE. Where quackgrass comes up after planting but before potatoes emerge, use up to 10 pounds of DOWPON per acre and wet the grass well. Do not apply DOWPON after potato plants emerge. Spring pre-planting treatment of quackgrass with 8 pounds of DOWPON per acre is effective. After 4 days, land can be plowed and potatoes planted immediately if normal soil moisture is present. Do not use DOWPON on land to be planted to White Rose or red skinned varieties.

SUGAR BEETS: For use any time from emergence through the 6-leaf stage: To control small seedling grasses other than wild oats, apply 2 to 4 pounds DOWPON per acre over- all by air or ground equipment. Use the 4 pound rate only if grasses are beyond the 2-leaf stage or are not growing well due to dry conditions. A rate of 5 to 8 pounds DOWPON may be required to control wild oats or quackgrass. These higher rates may cause stunting of beets and reduce yields. In order to minimize injury to beets, the 5 to 8 lb. rate should be applied only from ground equipment and as a spray directed away from the sugar beet plants. DOWPON at 2 to 3 pounds per acre may be used in tank mix combination

treatment only to areas where grasses are a problem. With band or spot treatment the amount of spray should be reduced in proportion to the area actually treated. Apply when grasses have begun growing well in the spring, but before heading. Spray to just wet grass without runoff. Re-treat as needed but use no more than twice in any one growing season. Keep spray off crop foliage and fruit, and do not apply within 30 days of harvest. Do not graze livestock on treated areas.

APRICOTS, PEACHES, PLUMS (PRUNES): Bearing and nonbearing in western areas: Use at rate of 6 to 7 pounds of DOWPON per acre on broadcast basis. Apply as a directed spray to a 4 to 8 foot wide band on each side of tree row or apply as a spot treatment only to areas where grasses are a problem. For band or spot treatment the amount of spray should be reduced proportionate to the area actually sprayed. Spray to just wet without runoff. Apply when grasses have begun growing well in the spring but before heading. Retreat as needed, but use no more than twice in any one growing season. Keep spray off crop foliage and fruit and do not apply within 30 days of harvest. Do not graze livestock on treated areas.

PEACHES: Bearing and non-bearing in other than western areas: For spot treatment use 1 pound of DOWPON per 20 gallons of water and spray grass to wet, without runoff. As directed spray use no more than 3 1/2 pounds of DOWPON per acre per application on a broadcast basis. Keep spray off foliage and fruit and do not apply within 30 days of harvest. Apply no more than twice in any growing season. Do not graze livestock on treated areas.

GRAPES: Bearing, in California and Arizona: Use DOWPON at the rate of 10 pounds per treated acre on a broadcast basis. Apply as a directed spray to a band 3 inches wide centered on vine row. Keep spray off grape foliage and fruit. Do not apply more than twice in any growing season. Do not apply within 30 days of harvest. Keep spray out of irrigation furrows. Do not graze livestock on treated areas.

MISCELLANEOUS USES: Consult Agricultural Sales, The Dow Chemical Company, P. O. Box 1706, Midland, Michigan 48640 for use directions on the following crops: Bananas, Coffee, Corn (Field or Sweet), Directed Postemergence Sprays, Cranberries, Macadamia Nuts, Peas, Potatoes, Late Season Directed Sprays.

USE PRECAUTIONS

To avoid injury to sensitive plants, do not allow spray to drift onto them. DOWPON is contact herbicide that is effective on broadleaf weeds and other desirable plants. Flush spraying equipment with plenty of water immediately after use to avoid contamination of other equipment.

Do not reuse container. Destroy by burning or burying in non-cropland away from water supplies.

Apply only DOWPON to crops and areas for which it is specifically labeled.

Local conditions affect the use of herbicides. State agricultural experimental station or extension service weed specialists in many states issue recommendations to fit local conditions.

TO AVOID CAKING, KEEP INNER POLYETHYLENE BAG TIGHTLY CLOSED.

CAUTION

KEEP OUT OF THE REACH OF CHILDREN

CAUSES EYE IRRITATION

MAY CAUSE SKIN IRRITATION

AVOID CONTACT WITH EYES, SKIN OR CLOTHING

In case of contact, flush eyes with plenty of water for at least 15 minutes and get medical attention. For skin, remove contaminated clothing and wash skin with plenty of water.

Wash clothing before re-use.
