For EAA, the overhead sprinkler system is applied to overhead sprinkler irrigation systems. The system is designed and applied in a field to provide a uniform distribution of water over the entire area of the field.

emulsifiable oil and 10RSBAY 41 in a steel

that water is being pumped at the amount of injection that will be needed per pound of the desired herbicide and time of operation. Pump one-half of the nominal capacity of the steel mix tank into the mechanical or hydraulic agitation and continue to mix. Add the remainder of the ORSBAN 4E and continue to agitate the ORSBAN 4E plus mixture. Set the sprayer system to deliver the desired amount of water per acre; water rates ranging from 10 to 20 gals. per acre are preferred. Start the water pump and sprinkler and, as the system reaches the desired pressure and speed, begin spraying the mixture. The ORSBAN 4E will

Restrictions: The above information was obtained from the records of the FBI, which are maintained under the provisions of the Freedom of Information Act, 5 U.S.C. § 552. This information is being furnished to you for your information only. It is not to be used for any other purpose.

SWEET CORN Grown Only in Florida and Georgia: Use ORSBAN 4E in aerial applications of 0.25 to 0.50 lb a.i./a. for control of early and late silking corn earworm. For application as a broadcast foliar spray at the first silking, 2 pints per acre. Mix the specific rate with enough water to ensure thorough coverage and apply using suitable aerial equipment spray equipment for aerial application of at least 2 gallons of spray per acre. Treatments should be made before damaging pest populations are developing or present. Re-treat as necessary to maintain control, but no application more than 14 days after the first or every 20 treatments.

Factor 1

[illegible]

Restrictions: (1) The information in this report is to be used for the purpose of the study only and is not to be distributed outside the study.

[illegible]

NOTE: The recommended dosage rate of 2 pint per acre will not achieve the high degree of control of the higher label rate but will minimize the damage done by plant bugs and cotton fleahopper and allow the beneficial insects to survive build up and be available to aid in the control of bollworms infesting cotton.

use ORSBAN 4E for control of the following pests
in Arizona and California at the dosages
indicated

Armyworms cotton aphid cotton
leafhopper *Lygus* salt marsh
ateprial thrips 1 to 2 pints per acre.

Boxworms (Heterophyes spp.) box weevil
cutworm's p. & bc worm 2 birds per acre

*018 The 2 pint rate was used in the suppression of
the leaf miner and spider mites.

After application of the fertilizer, the soil is worked to a depth of 10 to 15 cm using a rotary hoe disc or other suitable tillage equipment in the usual manner as soon as the soil is dry enough.

Restrictions: Do not make more than one application per season.

TREE FRUITS Use COR564N 4E as a dormant or pre-bloom spray at the rates indicated to control sucking insects on the crops listed.

Crop	Insect	Dosage LORSBAN 4E
Apples	Rusy apple aphid San Jose scale Lobbing scaleworms	
Pears	San Jose scale Lobbing scaleworms Pear psyllid adults	
Plums	San Jose scale	
Prunes	Western plum aphid Lobbing scaleworms Prach twig borer	
Almonds	San Jose scale	
Peaches	Peach twig borer	
Nectarines	Lobbing scaleworms

conditions

1. The irrigation system should be checked to insure proper operation. The system should be checked to insure proper operation. The system should be checked to insure proper operation.

1. USE ONLY IN STEEL MIX TANKS
2. USERS OF LORSBAN 4E INSECTICIDE THROUGH OVERHEAD SPRINKLER IRRIGATION SYSTEMS SHOULD COMPLY WITH ALL FIRE REGULATIONS THAT APPLY TO CLASS 1C FLAMMABLE LIQUIDS. MINIMUM DISTANCES AND PROPER ELECTRICAL CONSTRUCTION IS ESSENTIAL TO SAFELY HANDLE LORSBAN 4E. ELECTRICAL INSTALLATIONS MUST MEET CLASS 1 GROUP DIV 1 OR 2 REQUIREMENTS AS SPECIFIED IN THE NATIONAL ELECTRICAL CODE 70 (NEC 70). THIS TYPE OF WIRING IS GENERALLY REFERRED TO AS EXPLOSION PROOF. CONSULT WITH A LICENSED ELECTRICIAN TO CORRECTLY WIRE THE INJECTION SYSTEM AS DEFINED BY NEC 70.
3. The irrigation pumping plant and the chemical injection pump should be interlocked so that if the irrigation pumping plant stops, the chemical injection pump also will stop. This procedure will prevent the possibility of pumping the entire irrigation pipeline with the herbicide mixture from the supply tank.
4. Check and vacuum relief valves on the pump. Devices are needed in the irrigation system.
