SPECIMEN LABEL

GENERAL DIRECTIONS - Mixing: When level full the enclosed scoop contains 1/4 ounce or 2 level tablespoonfuls of DOWPON M. Fill sprayer or sprinkling can full of recommended water, then add recommended amount of DOWPON M. Stir until dissolved, then add remainder of water.

When to Apply: Apply spray when grasses are actively growing but before seed stalks develop. Wet all foliage thoroughly to the point of run-off. Re-spray as necessary.

GENERAL GRASS CONTROL: Over-all Treatment: Use 10 scoops (7 1/2 ounces) of DOWPON M per 1000 square feet. Apply with sprayer or hose proportioner to wet the grass without extensive run-off. **Spot Treatment:** Use 4 scoops (3 ounces) of DOWPON M per gallon of water. Spray to wet grasses using a pump-up or back-pack sprayer. With a hose proportioner (1 pint or quart capacity container) use 4 scoops of DOWPON M in one pint of water and apply to wet at a 1 to 8 volume ratio. With a sprinkling can use 2 scoops of DOWPON M per gallon of water and apply to wet the grass. **Do not drench or apply excessively.** Treat grasses near established tree trunks using 2 scoops of DOWPON M per quart of water. Apply to just wet the grass using a pump-up sprayer. Do not soak the area. Do not use near water plants, newly planted trees, or trees less than 4 years old.

WEED-GRASS CONTROL IN DICHONDRA LAWNS AND IVY (California): Controls Bermudagrass and young stages of annual grasses and crabgrass. **1. Apply to mature dichondra - NEVER on newly seeded or newly transplanted areas.** If lawn has not been fertilized, apply fertilizer and then apply water 1 to 7 days before applying DOWPON M. **2. Apply in spring and summer when weed grasses are YOUNG and GREEN.** **3. Apply to cool portions of weed grasses in a late mist spray.** Use a minimum of water - just enough to wet foliage as a light rain would do. **4. DO NOT** soak the soil. Use a sprayer with an insecticide nozzle to produce a fine mist. **A watering can is unsatisfactory.** **5. For Spot Spraying:** Use 2 level scoops (one ounce) of DOWPON M per 6 quarts of spray. Apply as directed in 1 through 5 above. **6. For Over-all Coverage:** Mix spray solution to evenly distribute no more than 2 ounces to 1000 square feet of turf area. The amount of water used will vary

depending on type of sprayer used - usually one to two gallons of water is sufficient to cover 1000 square feet.

LAWN RENOVATION IN CALIFORNIA AND ARIZONA: Mow dead vegetation if present. Wait two weeks for new grass growth, then spray thoroughly using 1/2 pound DOWPON M in 4 gallons of water per 1000 square feet. After 2 to 3 weeks, water at least 15 minutes each day for 1 week. Wait 4 to 6 weeks to seed, plug or sprig.

WARNING: To avoid injury to desirable plants, do not allow spray or spray drift containing DOWPON M to contact foliage or roots of such plants, including lawns or other desirable turf. Do not use close to ornamentals or fruit trees other than apple and pear. DOWPON M in the soil may inhibit seed germination and plant growth for 30 days or more, depending on dosage, soil type, temperature and rainfall. Accordingly, on land to be planted to grasses and garden crops, delay planting for at least 30 days.

WARNING: KEEP OUT OF REACH OF CHILDREN. CAUSES IRRITATION OF EYES. MAY BE HARMFUL IF SWALLOWED. MAY CAUSE SKIN IRRITATION. Avoid contact with skin. Eyes, nose, mouth and clothing should be protected with water. If contact with eyes, nose, mouth and clothing occurs, flush with water for at least 15 minutes and get medical attention. If swallowed, get medical attention immediately and wash stomach with plenty of water. Do not induce vomiting. If on skin, wash with plenty of water and soap.
