TRANSLATION: (TO THE USER: If you cannot read English, do not use this product until the label has been fully explained to you.)

DIRECTIONS FOR USE

For a complete list of crops and pests, see the separate label attached with this product.

General Information

LORSBAN 50-SL is a wettable powder formulation designed for use as a preplant, slurry treatment of field corn, lima bean, snap bean, and sweet corn seeds. It is highly effective against seed-corn maggots. SL may be applied to seeds in a slurry solution. Do not use in water. Do not use in areas where the product may be washed away. Do not use in areas where the product may be washed away.

Use and Dosage Recommendations

For a complete list of crops and pests, see the separate label attached with this product.

Slurry Treatment

Slurry treatment of seeds is recommended for the control of seed-corn maggots. Wettable powder is mixed with water to form a slurry. The recommended concentration for each crop is given on the separate label. Generally, 10% slurry is used. Slurry treatments require a minimum of 24 hours of contact. Complete charring than smother surface treatments. If a fungicide is used, it should be added to the slurry in accordance with its label directions. Mix the slurry with the seed using a rotating drum or similar device.
