SL2160

Apply one-half to two quarts of GARLON 4 herbicide in 50 to 200 gallons of water, 1/4 to 1/2 inch of rainfall, or broadcast weeds actively growing in tall fescue, bluegrass, or perennial ryegrass turf. Do not use on other grass species whose injury can be tolerated. To minimize grass injury, repeat applications should be made at least four weeks apart. Damage will occur if trees or shrubs are contacted by spray mixture.

To improve spectrum of activity, amine salt or ester formulations of 2,4-D may be tank mixed with GARLON 4 herbicide.

GENERAL INFORMATION

GARLON 4 Herbicide is a selective herbicide for use on broadleaf weeds in turf areas and perennial grasses. It is a contact herbicide and is effective on many broadleaf weeds and grasses. It is a selective herbicide and is effective on many broadleaf weeds and grasses.

Figure 1 consists of four scatter plots arranged in a 2x2 grid. The top row shows the relationship between the number of children and the number of children in the household. The bottom row shows the relationship between the number of children and the number of children in the household. The left column shows the relationship for the number of children in the household, and the right column shows the relationship for the number of children in the household. The plots show a positive correlation between the number of children and the number of children in the household.
