### Treatment of Preconstruction Lumber and Logs

General Information: DURSBAN WT can be diluted with water or suitable base oil. To prepare the spray, dilute DURSBAN WT as shown in the following Spray Dilution Chart

#### Spray Dilution Chart

Gallons of Spray Mixture Desired	Gallons Of DURSBAN WT To Use	
	0.5% Spray	1.0% Spray
Oil or Water-Based Sprays		
50	1/2	1
100	1	2
250	2-1/2	5
500	5	10
1000	10	20

#### Directions for Application

To protect unseasoned or seasoned lumber and logs from wood destroying insects, such as termites, carpenter ants and beetles, (ambrosia, powder-post, old house borers and others) totally treat wood with a 0.5% or 1.0% dilution of chlorpyrifos. This dilution can be applied by various methods including spraying, brushing, dipping and pressure treatment. Frequent monitoring of dip and pressure systems are necessary to insure that the desired level of chlorpyrifos is maintained. Wood can be safely handled after treatment when dry.

1. For dip treatments, the wood should be totally submerged in the dilution until thoroughly wet and then allowed to dry in a suitable location. Dipping solutions to which DURSBAN TC have been added should be agitated before use if left unused for long periods of time. Sediment, debris and other deposits should be periodically cleaned from the tank.
2. For pressure treatments, the wood should be placed in the treatment chamber, the chlorpyrifos dilution added and the system pressurized up to 250 psig for up to 1 hour depending on the density and type of wood treated. After the pressure is released and the system drained, the wood should be placed in a suitable location for drying.
