INSTRUCTIONS FOR THE USE OF DACTHAL  
STRAWBERRIES, VEGETABLES & ORNAMENTALS

STRAWBERRIES:

In setting out strawberry plants, 1 lb. of Dacthal Herbicide per 200 sq. ft. of treated area should be applied to the newly-planted beds. On established strawberry plantings, Dacthal Herbicide should be applied before weed seeds germinate in the fall or immediately following mulch removal in the early spring. Do not apply after first bloom.

These applications may be made directly over the plants without injury.

VEGETABLES:

When seeding broccoli, Brussels sprouts, cabbage, cauliflower, onions, potatoes (whole or cut pieces), and snap beans, application of Dacthal Herbicide should be made to the soil surface along with or immediately following the seeding.

~~When seeding~~ When transplanting broccoli, Brussels sprouts, cabbage, cauliflower, onions, peppers and sweet potatoes, Dacthal Herbicide should be applied immediately after transplanting and prior to the germination and emergence of susceptible weed species. Dacthal Herbicide when applied directly over these newly set plants does not damage foliage.

Follow the directions and limitations given on our "Dacthal Herbicide for Vegetables" label.

ORNAMENTALS:

Dacthal Herbicide is specifically recommended for weed control with the following: Azalea, Barberry, Euonymus, Forsythia, Japanese Andromeda, Juniper, Lantana, Pachistima, Pine, Rose, Tree peony, variegated privet, Wilson ivy, Yew . . .
