**SNAROL****SNAROL****KILLS  
SNAILS & SLUGS**

SNAROL PELLETS are a specially prepared bait for the control of snails and slugs. The Metaldehyde in SNAROL PELLETS attracts and kills snails and slugs. These pests are night feeders and inhabit damp, cool places such as flower and vegetable gardens, around fences, hedges and bushes. The presence of snails and slugs can be determined by their shiny mucous-like trails.

**DIRECTIONS**

Spread SNAROL PELLETS late in the day, before or after thoroughly wetting the areas likely to be infested. Care should be taken when spreading SNAROL PELLETS, to apply them to the soil and not directly on plants.

For cabbage, melons, carrots, celery, kale, peas, beans, corn, tomatoes; apply to soil surface around plants. Do not contaminate edible parts. For strawberries, do not use within 6 days of harvesting.

Continuous watering and high temperatures cause SNAROL PELLETS gradually to lose some of their effectiveness, so during spring and summer months repeat treatment every week or ten days. Such repeated treatment will also serve to control new broods emerging during this period. Three baitings, ten days apart, usually gives control of new hatch. During fall and winter, treatment every 2 weeks is usually satisfactory.

## KILLS SNAILS & SLUGS

One pound of SNAROL PELLETS is sufficient to treat about 1200 sq. ft. of surface area. SNAROL is also available in MEAL form.

### WARNING

May be fatal if swallowed. If swallowed, induce vomiting. Call physician immediately. Harmful dust. Avoid contact with skin, eyes and clothing. Wash hands with soap and water after using.

Keep out of reach of children.

Keep domestic animals and poultry off treated area. Bait is attractive to dogs and chickens.

Do not apply directly on fruits, vegetables or crops, but apply on ground under plants. Dispose of empty container or any spillage promptly—burn or bury. Store in a cool, dry place.
