NORTHERN LAWNS (covers 8,000 sq. ft.)	SOUTHERN LAWNS (covers 16,000 sq. ft.)
Bluegrass, Fescue, Rye, Zoysia	Bahia, Bermuda, Bentgrass, Centipede, St. Augustine
NOTE: Do not use on Florida varieties of St. Augustine grass in Florida. If you are unsure as to what type of grass you have, contact your county extension agent.	

USE TIPS

- 1) For best results, mow before treating weeds.
- 2) Do not treat when air temperatures exceed 85° F or damage to grass may occur.
- 3) Do not water within 6 hours after treatment. Poor weed control may result if rainfall occurs within 6 hours of application.
- 4) **For new lawns**, treat within 24 hours after seeding. **On established lawns**, wait 3 weeks after treatment before re-seeding. Once new grass has started to grow, wait until it has reached a height of 2 inches before treating. Treat as directed for newly sodded lawns if weeds are present.
- 5) Do not allow spray to get on vegetables or ornamental plants since injury may result. Do not spray around roots of trees and ornamentals. Clover will be damaged if sprayed.
- 6) Whether using a hose-end sprayer or pressure sprayer, avoid sprays which are too fine because they can drift and damage other plants.
- 7) If certain tough weeds are not dead within 3 weeks, repeat treatment. Broadcast application is not necessary; follow spot treatment directions.
- 8) Use of this product when air temperatures are below 60F may result in delayed appearance of weed control.

USE TIPS FOR READY-SPRAY NOZZLE

- (Replaces #6) Avoid sprays which are too fine because they can drift and damage other plants.
- (Replaces #7) If certain tough weeds are not dead within 3 weeks, spot treat. It will take about 20 minutes to apply this bottle. Actual time will vary depending on water pressure.
