

# SELIG'S ORMITE

ACTIVE INGREDIENTS 100%  
ORTHODICHLOROBENZENE

FOR THE CONTROL OF  
**LYCTUS POWDER POST BEETLES, TERMITES OR WHITE ANTS**

## DIRECTIONS

Apply liberally with sprayer or brush to all infested woodwork. Several applications may be necessary as the wood must be thoroughly saturated to get the best results.

Woodwork treated may be painted or varnished if sufficient time is allowed for penetration and evaporation.

Wood infested with non-subterranean termites or white ants may also be successfully treated in the same manner.

For general use as a soil poison and in buildings with dirt basements, use as follows:

Dig a trench about a foot wide and one foot deep, in no case lower than the footing, in close proximity to the building foundation. For buildings with deep foundations, trench should be one foot wide and thirty inches deep. Grass plants and other shrubbery within three feet of the trench should be removed or protected by tar paper. Use one gallon of the product to five feet of trench and then add a layer of soil about six inches thick. Add the remainder of the chemical and refill the trench with soil. As an added precaution, spray the surface of the basement floor with WEED KILLER. This is a general termite preventive which is diluted one part to seven parts of water for this use.

**CAUTION** - Avoid breathing vapor or fumes.

Avoid contact with skin, eyes, nose, mouth.

Do not spray near or toward open flames.

Wash thoroughly after use.

## CAUTION

## KEEP OUT OF REACH OF CHILDREN
