WEEVI-KIL

**KILLS MILL INSECTS BY CONTACT
100% ACTIVE INGREDIENTS**

**Petroleum Distillates; B-Butoxy B'-Thiocyano Diethyl Ether;
N-Octylbicycloheptenedicarboximide; *Technical Piperonyl Butoxide;
Pyrethrins, and Essential Oils.
*(Butyl Carbityl) (6-Propyl Piperonyl) Ether and Related Compounds.**

WEEVI-KIL is an improved insecticide developed especially for use in connection with the control of insects which are destructive to food products.

It is especially recommended for use in Grain Elevators, Flour Mills, Rice Mills, Macaroni Plants, Grocery Warehouses, Peanut Plants, Candy Factories, Bakeries and other similar places.

WEEVI-KIL kills Flour Beetles, Rice Weevils, Indian Meal Moths, Saw Tooth Grain Beetles and many other similar insects when used according to directions. WEEVI-KIL is an aid in the control of pests in grain and other stored products.

Weevils, Moths, Beetles and many other similar insects breed in nooks, corners, crevices, and other secluded places where conditions are ideal for propagation. Spray WEEVI-KIL in all such places as well as aisles, walls, windows, and around and about machinery. Fill rooms with fine mist spraying liberally towards the ceiling, working downward toward the floor. Spray WEEVI-KIL in the late afternoon so that all doors, windows, and other openings may be left closed for the longest practical period, and thus subject the insects to the deadly mists of WEEVI-KIL for the longest time. Insects must be enveloped in the WEEVI-KIL mist or contacted with its spray in order to kill them. Thus, best results will be obtained. Keep walls, rafters, machinery, etc., well swept, and also pound elevator legs so that refuse will fall into the boot; and then clean out the boot. Cleanliness will reduce infestation. Infestation may be reduced or abated by the regular application of WEEVI-KIL.

CAUTION: KEEP OUT OF REACH OF CHILDREN.

Avoid breathing spray mist. Avoid contact with the skin. Harmful if swallowed.
