

SELIG'S BANO 5AW

ACTIVE INGREDIENTS

Ortho-Cresyl Dimethylammonium Chloride.....3.25%
Isopropyl Alcohol.....33.00%

INERT INGREDIENTS.....63.75%

BANO 5AW, odor control chemical specialty, incorporates the most efficient bacterial control chemicals and aromatic components to give a highly concentrated product for the dual end purpose of odor and bacterial control. It is used to combat malodors associated with bacterial decomposition, leaving a pleasant, nonoffensive odor.

BANO 5AW, used in hatcheries, is demonstrated to be the most effective in the control of malodors arising from droppings which release amine and other malodors associated with the poultry raising industry.

BANO 5AW is miscible with water in all proportions up to 50%. Effective in a dilution of four ounces in a gallon of water when used as a spray directly on the excrement or droppings areas of poultry houses.

Remove gross debris and wash down with water. Wash or spray a solution of 4 ounces to 1 gallon of water for germicidal effectiveness against Salmonella organisms.

Economical for reodorization of chicken, turkey, duck and other poultry raising areas.

CAUTION: KEEP OUT OF REACH OF CHILDREN

AVOID CONTACT WITH SKIN AND EYES. AVOID CONTAMINATION OF FOOD. MAY BE HARMFUL IF SWALLOWED.
