

If inhaled - Remove victim to fresh air. Apply artificial respiration if indicated.

If on skin - Remove contaminated clothing and wash affected areas with soap and water.

If in eyes - Flush eyes with plenty of water. Call a physician if irritation persists.

(Note: Recommendation for salt water emesis was eliminated by PR Notice 80-2). Due to the limited label space you may incorporate the above precautionary text in paragraph form.

- 4. Delete "SAFER" from the front panel claims. The Regulations do not permit statements declaring superior performance or safety in relation to other products.
- 5. The ingredients statement must appear on the front panel. Note that the heading should be Active Ingredient, since there is only one, and the declaration should be "Lindane (Gamma isomer of benzene hexachloride)".
- 6. Expand the heading DIRECTIONS to DIRECTIONS FOR USE and add immediately underneath this heading "It is a violation of Federal law to use this product in a manner inconsistent with its labeling."

[NOTE- Quotation marks are not to be reproduced on your labeling.]

- 7. It is assumed that the plate used to burn the tablet should not be used for food purposes after the pesticide application use. A statement to that effect should appear in the ^{Precautions} ~~Warnings~~ section of the label.
- 8. Refer to the enclosed type size guide for assistance in selecting print sizes for label elements with minimum size requirements.
- 9. Add the following disposal statement, "Disposal: Discard empty container in trash".

Submit five copies of labels bearing the above revisions prior to release for shipment. Note that after April 15, 1985, the subject product may not be distributed, offered for sale, held for sale, sold, shipped or delivered for shipment by you unless the labeling complies with the above revisions.

A stamped copy of the label is enclosed for your records.

Sincerely yours,

George T. LaRocca
Product Manager (15)
Insecticide-Rodenticide Branch
Registration Division (TS-767)

BEST AVAILABLE COPY

P.S. Based upon our phone conversation of March 2, 1985 we noted that the only labeling associated with the marketing of this product is the subject labeling submitted with your March 14, 1985 application.

BUGTAB

OUTDOOR
BUG KILLER

SAFER, EASY TO USE

4
TABLETS
PER
UNIT
ALLOWED

EPA EST. #495-IL-1
EPA REG. #495-7

SIMPLY LIGHT A TABLET. AN EFFECTIVE CLOUD OF SMOKE QUICKLY KILLS FLIES, MOSQUITOES, GNATS, WASPS, AND MANY OTHER SMALL FLYING AND CRAWLING INSECTS.

DIRECTIONS

PLACE A TABLET ON A LARGE PLATE AND POSITION PLATE IN CENTER OF THE AREA TO BE TREATED. HOLD A LIGHTED MATCH TO THE TABLET. THE TABLET WILL BEGIN TO SMOKE. NO FLAME OR FIRE HAZARD!

Not for Indoor Use.

OUTDOORS LIGHT SEVERAL TABLETS IN THE AREA TO BE TREATED. LEAVE AREA UNTIL THE SMOKE DISAPPEARS. A WHITE FOG-LIKE CLOUD KILLS FLIES, MOSQUITOES, GNATS, WASPS, FLYING MOTHS, ANTS AND CERTAIN OTHER FLYING AND CRAWLING INSECTS.

CAUTION. AVOID PROLONGED BREATHING OF FOG. KEEP OUT OF REACH OF CHILDREN. AVOID CONTACT WITH SKIN AND EYES. WASH HANDS THOROUGHLY AFTER HANDLING. IF TAKEN INTERNALLY, GIVE A TEASPOON OF SALT IN A GLASS OF WARM WATER. CALL A PHYSICIAN IMMEDIATELY.

ACTIVE INGREDIENTS

- Gamma Isomer of Benzene
- Chloride from Lindane 20%
- INERT INGREDIENTS 80%

Net Contents 4 grams

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS & DOMESTIC ANIMALS

CAUTION

Harmful if swallowed. Contact with skin can cause toxic symptoms. Avoid breathing spray mist. In case of contact with skin, wash with soap and water. Avoid contamination of feed and foodstuffs.

ENVIRONMENTAL HAZARDS

This product is toxic to fish, birds, and other wildlife. Keep out of lakes, streams and ponds. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.

PHYSICAL OR CHEMICAL HAZARDS

Do not use or store near heat or open flame.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

SUBTERRANEAN TERMITE CONTROL DIRECTIONS FOR USE ONLY FOR USE AND STORAGE BY COMMERCIAL PEST CONTROL OPERATORS

Chemicals for soil treatment are used to establish a barrier which is repellent to termites. The chemical emulsion must be adequately dispersed in the soil to provide a barrier between the wood in the structure and the termite colonies in the soil.

It is necessary for the effective use of this product that the service technician be familiar with current control practices including trenching, rodding, sub-slab injection, and low pressure spray applications. These techniques must be correctly employed to prevent or control infestations by subterranean termite species of *Reticulitermes*, *Zootermopsis*, *Heterotermes* and *Coptotermes*. Choice of appropriate procedures includes consideration of such variable factors as the design of the structure, existence of air circulation in sub-floor crawl space, water table, soil type, soil compaction, grade conditions and the location and type of domestic water supplies. The biology and behavior of the involved termite species are important factors to be known as well as suspected location of the colony and severity of the infestation within the structure to be protected. For advice concerning current control practices for specific local conditions, consult resources in structural pest control.

Use antitank flow equipment or procedures to prevent siphonage of pesticide back into water supplies. Do not treat structures that contain cisterns or wells within the foundation. Soil around structures with well or cistern close to the foundation can be treated as follows. Do Not Apply Under Pressure. Soil should be removed to an area safe from well or domestic water contamination, treated, allowed to stand undisturbed for two to four hours then returned to the trench which has been lined with 4 mil. plastic sheeting. Be careful not to puncture plastic sheeting when returning soil to the trench. Do not treat soil that is water saturated or frozen. Consult state and local specifications for recommended distances of treatment areas from wells, and refer to Federal Housing Administration Specifications for further guidance.

All nonessential wood and cellulose containing materials, including scrap wood and form boards, should be removed from around foundations walls, crawl spaces, and porches. This does not include bearing structural soil contact wood. Do not use treated soil to backfill.

PRECONSTRUCTION SUBTERRANEAN TERMITE TREATMENT

Effective preconstruction subterranean termite control requires the establishment of an unbroken vertical and/or horizontal chemical barrier between wood in the structure and the termite colonies in the soil. To meet F.H.A. termite proofing requirements, follow the latest edition of U.S. Housing and Urban Development (HUD) Minimum Property Standards.

Use a 1% water emulsion for subterranean termites. To produce a 1% water emulsion, mix 1 gallon of Stephensons Chemicals 4 lb. Emulsifiable Concentrate with sufficient water to make 50 gallons. After grading is completed and prior to the pouring of the slab, slab supported/constructed porches or entrance platforms, make the following treatments. Applications shall be made by a low pressure spray for horizontal barriers over areas intended for ceiling floors, porches and other critical areas. Establish a vertical barrier in areas such as around the base of foundations, plumbing, back-filled soil against foundation walls and other critical areas.

1. Where it is necessary to produce a horizontal barrier, apply the emulsion at the rate of 4 gallons per 10 linear feet per foot of depth.
 - a. If concrete slabs cannot be poured over soil the same day it has been treated, a water-proof cover, such as polyethylene sheeting, should be placed over the soil. This is not necessary if foundation walls have been installed around the treated soil.
2. To produce a vertical barrier, apply the emulsion at the rate of 4 gallons per 10 linear feet per foot of depth.
 - a. Rodding and/or trenching applications should not be made below the top of the footing.
 - b. Trench need not be wider than 6 inches.
 - c. Rod holes should extend from the base of the trench to the top of the footing, and should be spaced about a foot to provide a continuous barrier.
 - d. Emulsion should be mixed with the soil as it is being replaced in the trench. Cover treated soil with a layer of untreated soil or other material.

3. Hollow block foundations or to make a continuous barrier at the rate of 2 gallons of emulsion the footing.
4. For crawl spaces apply at per 10 linear feet and foot foundations. Application in trenching (utilizing low pressure) foundation and around all:
 - a. Rod holes should be spaced continuously chemical barrier.
 - b. Trench need not be w foundation. The emulsion it is being replaced in with a layer of untreated such as polyethylene sheeting.

POSTCONSTRUCTION TREATMENT

Use a 1% water emulsion for a 1% water emulsion mix Chemicals 4 lb. Emulsifiable to make 50 gallons. Postconstruction applications and/or trenching (using low pressure) Do not apply emulsion until ducts, vents, water and sewer known and identified. Extreme contamination of these structures.

1. For slab-on-ground construction of emulsion per 10 linear sub-slab injection and/or trenching the top of the footing foundation and where not inside of foundation walls just beneath the slab along all cracks and expansion joints.
 - a. Drill holes about 12 inches apart.
 - b. Where necessary, drive the outside and force either along the inside cracks and expansion joints.
 - c. For shallow foundations approximately six inches above foundation walls. Do not drill. The emulsion should be at 4 gallons per 10 linear feet trench cover the soil.
 - d. For basements, apply at

2. Hollow block foundations to make a continuous barrier at the rate of 2 gallons of emulsion per 10 linear feet. Where foot from the grade to the base made by trenching at of emulsion per 10 linear of foundation walls, and floor along inside of foundation walls, along interior basements, and porches.
