

Whitmire PT 270 Dursban Residual
CRACK AND CREVICE INJECTION USE ONLY
DIRECTIONS FOR USE

STORAGE AND DISPOSAL: Store in original container in a cool, dry place. Do not use if container is damaged. Dispose of contents in accordance with local, state, and federal regulations.

HOW TO USE WHITMIRE CRACK AND CREVICE INJECTION EQUIPMENT:

Whitmire PT 270 Dursban Residual is a residual insecticide for use in cracks and crevices. It is effective against a wide range of insects, including cockroaches, ants, and termites. The product is applied using a specialized injection equipment. For detailed instructions on the use of the equipment, refer to the separate instruction sheet.

GRANULES: Granules are used for the treatment of areas where insects are present. They are applied to the surface of the material being treated. For detailed instructions on the use of granules, refer to the separate instruction sheet.

BOARDS & SHIMS: Boards and shims are treated by spraying the surface with the product. This is done to prevent insects from nesting in these areas. For detailed instructions on the use of boards and shims, refer to the separate instruction sheet.

ANTS: Ants are treated by spraying the surface with the product. This is done to prevent ants from nesting in cracks and crevices. For detailed instructions on the use of ants, refer to the separate instruction sheet.

GRANULES: Granules are used for the treatment of areas where insects are present. They are applied to the surface of the material being treated. For detailed instructions on the use of granules, refer to the separate instruction sheet.

LOCALIZED TREATMENT OF WOOD DESTROYING INSECTS: Localized treatment of wood destroying insects is done by spraying the surface with the product. This is done to prevent insects from nesting in cracks and crevices. For detailed instructions on the use of localized treatment, refer to the separate instruction sheet.
