One dispenser per 6,000 ft³ is considered an average need, with adjustments made on specific conditions at place of use. The dispenser activates the metered valve once every 15 min. The effectiveness of this product will be noticeable within 1 hr after the dispenser is activated. Recommended use is for 24 hr control; but if < 24 hr control is desired, set the dispenser to start 1 hr before control is desired and run 1 hr after control is no longer needed. Factors such as airflow rate, size of space treated, humidity and room temperature affect insect activity and control. As with any method of insect control, best results are achieved when sanitation and other positive insect prevention practices are followed. It is suggested that the container be changed once a month (when operated on a 24 hr basis).
