APPLICATION INSTRUCTIONS

[Alternate Text & Pictogram: For optimum performance in overhead treatments, align the actuator opening with the mark on valve cup. When treating in a downward direction, align the actuator opening directly opposite the mark on valve cup.]

**WASPS AND HORNETS:** Hold container in upright position. Stand a safe distance, 6 – 15 ft from the nest, and not directly underneath. Align actuator opening with the mark on the valve cup. Aim the actuator opening toward the nest with the wind at your back. Treat the nest until thoroughly wet. Contact wasps and hornets on the nest with spray when possible. The best time of day to treat is in evening or early morning, since wasps and hornets congregate on or in the nest at night.

**YELLOWJACKETS AND BEES:** Locate nest. Align actuator opening directly opposite the mark on the valve cup. Press down on the actuator and apply, using a sweeping motion, contacting any stimulated or stirred-up yellowjackets and bees around the nest opening. Then move forward to the nest opening and apply for 6 – 8 sec directly into the nest hole.

**SPIDERS (including Black Widow and Brown Recluse):** Apply directly to spiders and/or webbing. Before applying, consider the surfaces for potential staining or residue that spray may contact.
