**RAT AND MOUSE
KILLER**

Made with Warfarin
Does Not Develop
"Bait Shyness"

— DIRECTIONS —

Put 1/2 cup of Boyer's RAT and MOUSE Killer into shallow container where rats and mice are known to frequent. Protect children, domestic animals or pets by means of bait boxes or cages where necessary. Baiting should continue until last of feeding is noted — from 10 to 14 days from start of control. Where continuous source of infestation prevails, permanent bait stations should be strategically located and baits replenished as needed.

This package only contains enough poison to control 5 or 6 rats or several mice. If you use it up before the rats have stopped feeding, obtain more poison at once and replenish bait spots before they have been empty for 24 hours. Continue to expose this bait until all signs of feeding have stopped.

Sour, moldy or otherwise decomposed bait should be replaced promptly.

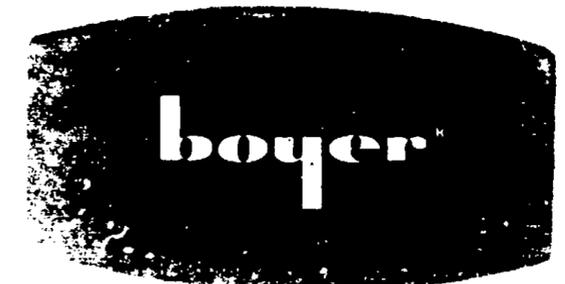

CAUTION

Boyer's RAT and MOUSE Killer contains as its active ingredients an anticoagulant chemical which if taken accidentally by humans, domestic animals or pets may reduce the clotting power of the blood and hemorrhage may result. In case baits are eaten. Give a tablespoonful of salt in a glass of warm water and repeat until vomit fluid is clear. Call a physician immediately.

Note to Physicians: Blood transfusions combined with intravenous injections and oral doses of vitamin K are indicated as in the case of hemorrhage caused by overdoses of bromaral.

ACTIVE INGREDIENTS
WARFARIN 0.025%
3-(4-acetylphenyl)-4-hydroxycoumarin
INERT INGREDIENTS 99.975%
