

Linck's Kilzall

DESTROYS GRASS AND WEEDS
WITHOUT AFFECTING SOIL

- When LINCK'S KILZ-ALL is applied it kills most weeds and grasses without leaving a harmful residue in the soil.
- When undesirable tufted grass or difficult-to-kill weeds exist in lawns or turf, replace with desirable grasses without digging.
- Renovate portions or entire lawn quickly with-out digging.
- Applied carefully will control most weeds and grasses around bushes, trees or shrubs.

DIRECTIONS FOR LAWNS OR TURF

- 1 Apply LINCK'S KILZ-ALL at any time during the growing season, preferably on a bright, sunny day. Cover foliage thoroughly. LINCK'S KILZ-ALL works only through foliage, not the root system.
- 2 Destruction is spectacular. Average turf should be brown and dead within 5 days. Tufted grasses, certain weeds and matted turf may require a second treatment. Reapply 5 days later if necessary.
- 3 When all vegetation is dead, usually 3-5 days after required applications, you are ready to seed.
- 4 Do not remove dead stubble unless you have matted turf in which case rake out or slice through with vertical cutting equipment. Seed must be lodged on soil to germinate. Bare spots should be scarified to a depth of 1/4" before seeding.
- 5 Water heavily before seeding. Seed at rate indicated for new lawns. Use back of rake to work seed to soil line if necessary. A good organic fertilizer will insure proper feeding. A light top dressing of screened peat moss will help retain moisture while seeds are germinating.
- 6 Keep area moist. On sunny days water if possible at mid-day till plants are established.
- 7 Keep children and pets off treated areas until this material is washed thoroughly into soil.

Caution

Harmful if swallowed. Wash thoroughly with soap and water after handling. Avoid breathing spray mist. Avoid contact with skin and eyes, contamination of feed and foodstuffs and fish ponds.

Not for use on vegetable gardens. Do not track through treated spots on to untreated lawn areas.

OTHER AREAS

As residue on soil is not absorbed by roots of surrounding plants, complete killing of weeds and grasses around shrubs, trees, bushes is quickly accomplished by carefully directing spray to the undesirable vegetation.

UNCULTIVATED AREAS ADJACENT TO PROPERTY

Where tall weeds or grasses are to be killed cover foliage thoroughly and repeat in 5 days if necessary. To kill the leaves on POISON IVY, BRAMBLES, BRIARS, STUMP SPROUTS — wet all foliage thoroughly and repeat if new growth develops.

FOR WEED CONTROL AROUND TREES, SHRUBS, BUSHES

Use tank sprayer only. Use 5 ozs. per gallon of water. Covers 200 sq. ft. To kill the leaves on poison ivy, stump sprouts, use 5 ozs. per gallon of water and wet foliage thoroughly.

PREFERRED EQUIPMENT

Conventional tank sprayer using low pressure.
Does not prevent new emergence of weeds germinating from seed. Ideal to use prior to applying pre-emergence weed controls.

**RATES TO USE WITH VARIOUS
EQUIPMENT FOR LAWNS OR TURF**

Equipment	Quantity	Per Coverage
	Gal. Water	Per Gallon
Water Can	1½ oz.	50 sq. ft.
Tank Sprayer	5 oz.	200 sq. ft.
"Linck's Wheel Pump Sprayer"	12 oz.	1000 sq. ft.

Large areas —
33-lbs. per acre
Use minimum 40 gal water per acre.

* Preferred method when using Linck's Liquid Sprayer is to cover area TWICE for each treatment. Apply first in one direction then cover again crosswise. Double absorption produces better kill and reduces "missed" areas. If only to be covered once, DOUBLE the rate indicated above.

IMPORTANT: Clean equipment thoroughly after use.

NOTE: 1 level tablespoonful 1½ oz.
3 level tablespoonful 1 oz.

After use...

start
new lawn
