

Ants are colonizers, Colony consists of Scouts, Nurses, Workers and the QUEEN ANT whose function in life is to produce eggs. She can produce thousands of eggs daily.

The ants you SEE are scouts and workers. Workers carry food back to the nest for the QUEEN, nurses and young ants. Surplus food is stored away for young ants when they pupate from eggs in about seven days. Thus ENTIRE colonies are destroyed with E-Z Ant Trap.

There are two principle types of ants... SWEET and GREASE eating.

E-Z Ant Traps contain both a SWEET and GREASE bait. Thus these baits appeal to both species.

Placed in the home, worker ants will enter the trap and return to the nest with the poisoned bait where it is consumed or stored.

Usually complete control is attained in 1-3 days with sufficient stored food to destroy pupating ants over the next seven days.

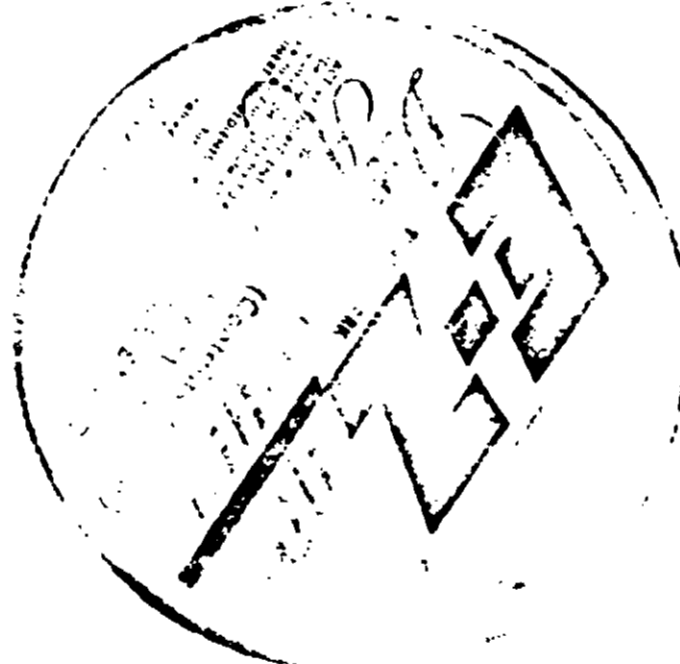

WARNING: Hazardous if swallowed or absorbed through the skin. Do not get on skin, in eyes, or on clothing. Wash with soap and water after using. Do not contaminate feed or foodstuff. Keep out of reach of children and domestic animals.
