

Granular

RAMROD

SELECTIVE HERBICIDE

For pre-emergence weed control in field corn, h

and soybeans (for seed only).

READ "WARNING NOTICE" BEFORE BUYING OR USING. IF NOTICE TERMS ARE NOT ACCEPTABLE, RETURN

MONSANTO COMPANY • AGRICULTURAL DIVISION • ST. LOUIS, MISSOURI

Where deep lister planting is practiced, only partial weed control can be expected on steep furrow sides. It is suggested that a seven inch band be applied at the bottom of the furrow. Best results can be expected where the granules lie on an even flat surface not subject to shifting by wind or rain.

With broadcast treatment, as long as Ramrod ²⁵ in controlling the grasses and weeds, there is no need for cultivation. For band treated fields, when first cultivation is made, set cultivator to throw soil into the row covering the band.

NOTE: Rates of application given on this label are general. Consult the State Agricultural Extension Service or Experiment Station concerning specific usage, dosages and methods of application.

Use of Ramrod ²⁵ in any manner not consistent with label directions can result in serious injury to the crop. Do not contaminate fertilizers, insecticides, fungicides and seed with Ramrod.

Do not cut immature plants for silage. Do not graze or feed treated forage to livestock.

WARNING NOTICE

Monsanto Company warrants that this product conforms to the chemical description on the label and is reasonably fit for the use referred to in the directions for use. The product is sold subject to the understanding that the buyer assumes all risks of handling which may result in loss of crop which are beyond the control of the seller, such as for example incompatibility with other products or materials in or on the crop.
