® Landmaster is a registered trademark of Monsanto Company.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

This label should be in the possession of the user at the time of the herbicide application.

This product is recommended for leafy spurge control in rangeland and pasture areas. It is also recommended for the control of those weeds listed on the product label booklet in these sites. Do not graze lactating dairy animals on treated grass within 7 days after application. Animals being finished for slaughter that are grazing in the treated area within 30 days of treatment must be removed from the treated area 3 days before slaughter. Do not cut forage for hay within 30 days of application. When this product is used for spot treatments where less than 10 percent of the total grazed area will be treated, there is no grazing restriction.

Best control of leafy spurge is obtained when applications are made during the seed-set growth stage. This typically occurs in

late June. Desirable grass species may be injured with this application. However, injury is usually temporary and normal growth resumes soon after application. Do not use this application on the same area for two consecutive years because grass injury will increase.

Apply 54 fluid ounces of this product per acre as a broadcast application in 3 to 10 gallons of water per acre.

Read and carefully observe the label directions, cautionary statements and all information on the Landmaster BW label.

Read "LIMIT OF WARRANTY AND LIABILITY" in the label for Landmaster BW before using this product. Those terms apply to this supplemental labeling and, if those are not acceptable, return the product unopened at once.
