Dear Registrant:

The labeling cited above and submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is accepted subject to the comments listed below.

Based on your certification, the Agency has accepted only those changes to your labeling which are necessary to comply with PR Notices 93-7 and 93-11, which reflect the WPS labeling requirements of 40 CFR part 156, subpart K. Any other labeling changes submitted in connection with this amendment application and not directly related to compliance with PR Notice 93-7 or 93-11 have neither been reviewed nor accepted by the Agency. If you wish to make any such changes, you must submit a separate amendment application proposing them. If your product registration is currently suspended, acceptance of this labeling amendment does not affect the suspension in any way.

A copy of your proposed labeling stamped "Accepted with comments" is attached. Make any required changes described in the attached and send three copies of final labeling as soon as it is available to:

GENERAL INFORMATION

It is a violation of Federal law to use this product in any manner inconsistent with the labeling.

This label should be in the possession of the user at the time of the herbicide application.

NOTE: When treating trees originating from root suckers, or where root grafting has occurred, product may move through the root system to damage untreated adjacent trees.

CUT STUMP APPLICATIONS

Woody vegetation may be controlled by treating freshly cut stumps of trees and resprouts with this product. Apply this product using suitable equipment to ensure coverage of the entire cambium. This product should not be diluted with water. Apply this ready-to-use product to the freshly cut surface **IMMEDIATELY AFTER CUTTING TREES.**

Cut vegetation close to the soil surface.

DELAY IN APPLYING THIS PRODUCT MAY RESULT IN REDUCED PERFORMANCE.

AVOID WASH-OFF OF PRODUCT FROM TREATED STUMPS BY RAINFALL OR OTHER MEANS WITHIN 6 HOURS OF APPLICATION.

For best results, trees should be cut during periods of active growth and full leaf expansion.

TREE INJECTION APPLICATIONS

Apply the equivalent of 2 ml of this product for each 2 inches of trunk diameter. This is best achieved by applying this product either to a continuous frill around the tree or to cuts evenly spaced around the tree below all branches. As tree diameter increases in size, better results are achieved by applying to a continuous frill or more closely spaced cuttings.

Avoid application techniques that allow runoff to occur from frill or cut areas in species that exude sap freely after frilling or cutting. In species such as this, make frill or cut at an oblique angle so as to produce a cupping effect and use undiluted product. For best results, applications should be made during periods of active growth and after full leaf expansion.

WOODY BRUSH AND TREES CONTROLLED

When applied as directed under the conditions described, this product will control or partially control most woody brush and
