This product is recommended for woody brush, tree and vine control in all noncropland sites, including forestry, roadsides, rights-of-way, industrial, residential, fencerows, railroads and aquatic sites.

For aquatic sites, this product may be injected into stems of trees and brush standing in water or wetlands. Do not apply directly to water or inject into stems below the water level.

Woody vegetation may be controlled by injection of EZJECT (TM) selective injection herbicide capsules. Inject the capsules using only the EZJECT capsule injection equipment. The capsules must penetrate through the outer bark into living phloem tissue to provide effective results.

For trees with less than 2.5 inch DBH (diameter breast height), inject one capsule per stem.

Inject one capsule every 4 inches, evenly around the trunk of the tree, below all major branches.

57

Trees may be injected at any time of the year except when wood is frozen.

This product moves throughout the tree from the point of injection to all roots and shoots. Symptoms appear gradually (normally within 2 to 4 weeks), beginning with wilting, yellowing and browning of the foliage. This is followed by deterioration of all roots and shoots.

This product will control the following species:

Alder	Hackberry	Ponderosa pine
Ash	Hawthorn	Poplar
