## SUPPLEMENTAL LABELING

READ THE ENTIRE LABEL FOR MAVERICK® PRO HERBICIDE BEFORE PROCEEDING WITH THE USE DIRECTIONS CONTAINED IN THIS SUPPLEMENTAL LABELING

"Label" as used in this supplemental labeling refers to the label booklet for Maverick Pro herbicide and this supplemental.

EPA Reg. No. 524-525

MAVERICK is a registered trademark of Monsanto Company.

### MAVERICK PRO HERBICIDE FOR ADDITION OF AMMONIA IN SPRAY SOLUTIONS WHEN APPLIED BY AIR.

Keep out of reach of children  
**CAUTION!**

In case of emergency involving this product, Call Collect, day or night, (314) 694-4000.

#### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

This label must be in the possession of the user at the time of application.

See "DIRECTIONS FOR USE" and "MIXING INSTRUCTIONS" sections of the label booklet for Maverick® Pro herbicide for essential product performance information.

#### Environmental Hazards

This chemical demonstrates the properties and characteristics associated with chemicals detected in ground water. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground water contamination.

This pesticide is highly toxic to non-target plants. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to plants in neighboring areas. Do not contaminate water when disposing of equipment washwaters or rinsate.

The use of any pesticide in a manner that may kill or otherwise harm an endangered species or adversely modify their habitat is a violation of Federal Laws.

#### MIXING INSTRUCTIONS

When applying Maverick Pro herbicide by air in 5 gallons per acre of spray solution, a spray solution pH of 6.0 to 8.0 is optimum. Addition of 2 to 4 quarts of a 7 percent ammonia solution for every 100 gallons of spray solution will increase the pH of the spray solution to within the optimal range. Failure to adjust the pH of spray solution may result in reduction in weed control.

Fill the spray tank to about three-fourths of the desired volume prior to mixing. With agitation, add Maverick Pro herbicide and nonionic surfactant to the spray solution. Then adjust the spray solution pH with the ammonia solution.

**CAUTION:** Do not use ammonia with chlorine bleach as dangerous gases will form.

Read the "LIMIT OF WARRANTY AND LIABILITY" statement in the label booklet for Maverick Pro herbicide before using. These terms apply to this SUPPLEMENTAL LABELING, and if these terms are not acceptable return the product unopened at once.
