ENVIRONMENTAL HAZARDS

This pesticide is toxic to fish. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

ML-13G is used to control algae, bacteria and fungi in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime and other deposits. An initial slug addition of 4.0 to 10.0 fluid ounces of ML-13G per 1000 gallons of water to provide a concentration of 32 to 80 parts per million of ML-13G based on the total weight of water in the system, is recommended. Repeat initial dosage until control is evident.

Subsequent slug additions of 1.0 to 10.0 fluid ounces of ML-13G per 1000 gallons of water (8 to 80 parts per million of ML-13G) should be employed every 2 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of water cooling towers.

ML-13G is used to control bacteria in industrial air-washing systems that maintain effective mist eliminating components. Prior to its

use, systems should be cleaned to remove bacterial slime other deposits. An initial slug dose of 14.8 to 24.7 fluid ounce ML-13G per 1000 gallons of water is recommended. Repeat in dosage until control is evident. Subsequent slug additions of 1 to 24.7 fluid ounces of ML-13G per 1000 gallons of water sho be employed each 1 to 5 days, or as needed. The frequence addition depends upon the relative amount of bleedoff and seve of the bacterial problem. Slug additions may be made to the su or to the water collection travs of the airwash system.

ML-13G is used to control the growth of algae in swimming pools, exterior spas, whirlpools, hot tubs, and decorative fountains that do not contain fish. For maximum effectivenes pools, spas, whirlpools, hot tubs, and decorative fountains co taining heavy growth of algae should be cleaned prior to usin ML-13G.

For pools having just visible algae growth, add an initial does of 50 to 77 fluid ounces of ML-13G per 10,000 gallons of wat and remove settled algae debris by cleaning. For treatment freshly cleaned and filled pool, add initially 27 to 50 fluid ound of ML-13G per 10,000 gallons of water. Subsequent addition of 9 to 18 fluid ounces of ML-13G per 10,000 gallons of water should be made every 5 to 7 days after initial treatment for maintenance.

Spas, whirlpools, hot tubs, and decorative fountains having ju visible algae growth require an initial dose of 5 to 8 fluid ounc of ML-13G per 1,000 gallons of water. For treatment of a free cleaned spa, whirlpool, hot tub, and decorative fountain, add initially 3 to 5 fluid ounces of ML-13G per 1,000 gallons of wa Subsequent additions of 1 to 2 fluid ounces of ML-13G should be made very 5 to 7 days after initial treatment for maintenan

ML-13G will prevent growth of most algae during the off-seas winter months when pools are not in use. For pools which has
