DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

FOR RECIRCULATING COMMERCIAL AND INDUSTRIAL WATER COOLING TOWERS:

Prior to use, systems must be cleaned to remove algae growth, microbiological slime, and other deposits. An initial slug addition of 94 fluid ounces of CS-EZ per 1000 gallons of water to provide a concentration of 800 part per million of CS-EZ, based on the total weight of water in the system is recommended. Repeat initial dosage until control is evident. Subsequent slug additions of 35 to 59 fluid ounces of CS-EZ per 1000 gallons of water (300 to 500 parts per millions of CS-EZ) should be employed every 2-5 days, or as needed. The frequency of addition depends upon the relative amount of bleed-off and the severity of the microbiological/fouling problem. Slug additions should be made in the sump of water towers. CS-EZ can also be fed continuously at a dosage rate of 35-59 fluid ounces of CS-EZ per 1000 gallons of water (300 to 500 parts per million of CS-EZ).
