Crabgrass

Control

6257

Control summer crabgrass, green and yellow foxtail, young goosegrass, witchgrass, barnyardgrass, and paspalums (except in California) such as dallisgrass.

Directions for Use

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

DO use when grass-type weeds are growing actively in grass or dichondra lawns.

DON'T use when rain is expected within 24 hours.

DO apply when foliage is moist from dew, rain, or sprinkling.

DON'T use when grass is so tall it touches bottom of spreader (mow lawn first in such situations).

DO withhold watering for at least 24 hours after application (to avoid washing particles off the leaves).

DON'T use on new lawns until after the third mowing.

DO make two applications 5-7 days apart.

DON'T use in St. Augustine, centipede, bahia, or carpetgrass lawns.

DO apply at Scott's Spreader (Standard, Automatic, or Precision Flow Control Model) setting 6 3/4 (treats 5,000 sq ft). For fast action on mature, matted crabgrass before seeding in fall... 9 1/2 (Treats 2,500 sq ft).

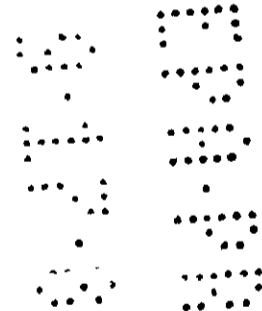

DON'T plant grass seed for 48 hours after using this product.

DON'T apply with a rotary-type spreader.

DO slightly overlap spreader's wheel tracks to avoid "stripes" of untreated lawn.

What to expect

This product needs time to work. It is designed to give slow, steady, controlled action. Results may be delayed by cold or dry weather. Susceptible weeds first turn pale green, then yellow and die. It is not necessary to remove dead weeds. They will eventually disintegrate and disappear.

BEST DOCUMENT AVAILABLE

WAX CONTROL

Only weeds that are in contact with the wax will be controlled. Weeds in the soil are not controlled.

In hot weather, wax granules may be washed off the lawn, but they will recover. Crabgrass and other weeds are particularly difficult to control in California.

Rain, sprinkling, mowing or heavy traffic within 24 hours reduces effectiveness by removing granules from the leaves. Repeat application may then be needed.

A few weeds may be resistant to control. If this happens, please forward specimens so we can identify them and advise you further.
