

How to use

TURFBUILDER (R) plus 4 TM

Feeds your lawn, prevents crabgrass, controls most rosette and vining weeds, also grubs and ants.

When to apply

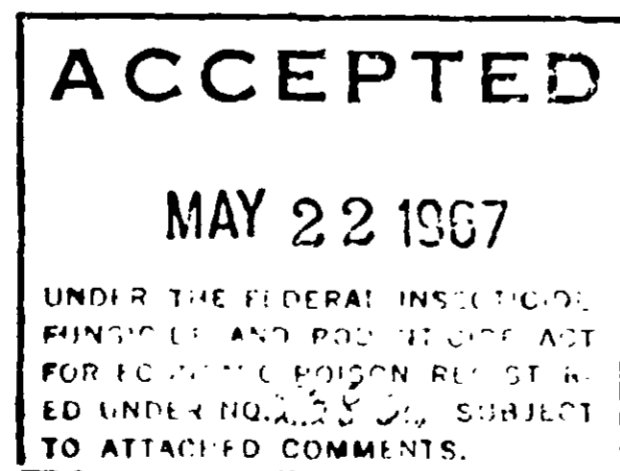

Apply in growing season after second spring mowing. To get full benefit of crabgrass control, also control of other annual grassy weeds, apply before roses are in full bloom.

Apply to foliage moist from dew, rain or sprinkling.

How to apply

See next page for Scotts Spreader setting. The photo below shows the approximate particle distribution to strive for if you are using any other make of spreader.

(photo)

Use Scotts Spreader setting 7½

Overlap spreader wheel tracks slightly so no strips are missed. Shut off spreader as you stop or turn around. (Spreader Photo)

Growth should not be so tall as to touch bottom of spreader.

Apply when foliage is moist from rain, dew or sprinkling—but when rain is not likely to occur for a day or two. Do not water in.

Even if heavy rain occurs within 24 hours after application, you will still get full feeding plus control of crabgrass, foxtail, goosegrass, barnyardgrass and lawn insects. Should other weeds persist after 3 or 4 weeks, apply Scotts new KANSEL.

Unusually resistant weeds such as yarrow, Canada thistle and wild carrot require follow-up treatments with KANSEL as foliage reappears.

Exceptions and precautions

Complete any planned raking or digging of the lawn before you apply TURFBUILDER PLUS 4. Otherwise you may break the protective barrier against crabgrass.
