ProTurf

fungicide III

patented *TRIONIZED* bonding ensures sustained action

prevents or arrests damaging activity of these fungus diseases

brownpatch	leafspot
copperspot	melting-out
dollar spot	red leafspot
gray snowmold	rust

FOR USE ON TURFGRASS AREAS

Make treatment prior to or at the first indication of disease activity. Apply to moist grass, preferably in early morning or evening.

Repeat at 10-14 day intervals during period of disease activity. In extreme cases, use at 7 day intervals.

Delay watering or mowing for 24 hours. If rain washes granules off grass within 24 hours after application, effectiveness is greatly reduced and that particular application should be made again at once.

Gray snowmold - apply prior to first heavy snow (early winter). Repeat in midwinter if lawn is free of snow. A final treatment in late winter as the snow melts, extends protection. Applications can be to dry or moist grass.

USE THIS SCOTT SPREADER SETTING TO ENSURE PROPER DISTRIBUTION

Treats 1/2 acre (11,000 sq ft) 6 1/2
Slightly overlay spreader wheel tracks to provide complete coverage.
