Lawn Insect  
Control

6854

ACCEPTED  
JAN 26 1970  
Under the Federal Insecticide,

**Lawn Insect  
Control**

controls white grubs

Such as Japanese beetle, European Chafer, South-  
ern chafer, *Phyllophaga* (May or June beetle)

Also controls the following insects in grass or dichondra lawns

armyworms	crickets	leafhoppers
Bermuda mites	cutworms	mole crickets (in Florida)
billbugs	earwigs	ticks
chiggers	fleas	sod webworms
chinch bugs	flea beetles	(lawn moth larvae)
clover mites	(in Dichondra)	vegetable weevil

**How To Use**

- DO** apply when insect activity or damage (chewed or browned leaves) is first observed in the lawn. For grubs, the most likely period is from late July through early October; the next most likely period is Spring. For mole crickets, the best time to apply is in May or June.
- DO** apply when lawn is dry.
- DO** water lawn *after application* to wash granules from the lawn foliage. If treating for grubs, water thoroughly so that active ingredients will be carried into the root zone.
- DO** make a repeat application if there are signs of renewed insect activity. (Normally, application gives effective control for approximately 6 weeks.)
- DO** apply at Scott's Spreader (Standard or Automatic Model) setting **5**.
- DON'T** treat just the browned areas of lawn. To prevent further damage, treat entire lawn.
- DON'T** use any other lawn control product for at least one week after application.
- DON'T** allow traffic on lawn after application until granules are watered off lawn foliage and lawn has dried.
- DON'T** use on fruit or vegetable plantings.
- DON'T** apply with a rotary-type spreader.
