Lawn Insect Control plus Fertilizer

Treats 5,000 sq ft / \$13.95

Lawn Insect Control plus Fertilizer

controls insects feeds the lawn Controls white grubs, Japanese beetle, European chaffer, Southern chaffer, Phyllophaga (May or June beetle).

Also controls the following insects in grass or dichondra lawns: armyworms, chinchbugs, grasshoppers, leafhoppers, Bermuda moths, clover cutworms, flies, meadow crickets (in Florida), chiggers, cutworms (in Michigan), ticks, and webworms (lawn moth larvae), vegetable weevils.

A PROBLEM-SOLVING PRODUCT BY SCOTTS, THE LAWN PEOPLE

How To Use:

- DO apply when insect activity or damage (chewed or browned leaves) is first observed in the lawn. For grubs, the most likely period is from late July through early October; the next most likely period is Spring. For mole crickets, the best time to apply is in May or June. DO apply when lawn is dry. DO water lawn after application to wash granules from the lawn foliage. If treating for grubs, water thoroughly (so that active ingredients will be carried into the roots). DO make a repeat application of Scotts Lawn Insect Control (with or without fertilizer) if there are signs of renewed insect activity. (Normally, applications give effective control for approximately 6 weeks.)
