billbugs	crickets	fire beetles	(in Florida)
chiggers	cutworms	(in Dickcissel's ticks)	
and webworms (lawn moth larvae)	vegetable worms		

A PROBLEM-SOLVING PRODUCT BY SCOTT'S, THE LAWN PEOPLE

How To Use

- DO apply when insect activity or damage (brown or brown and leaves) is first observed on the lawn.
- For grubs, the most likely period is from late July through early October, the next most likely period is Spring.
- For mole crickets, the best time to apply is in May or June.
- DO apply when lawn is dry.
- DO water lawn after application to wash granules from the lawn foliage. If treating for grubs, water thoroughly (so that active ingredients will be carried into the roots).
- DO make a repeat application of Scott's Lawn Insect Control (with or without fertilizer) if there are signs of renewed insect activity. (Normally, application gives effective control for approximately 6 weeks.)
- DO apply at Scott's Spreader (Standard or Automatic Models) setting 6X.
- DON'T treat just the browned areas of lawn. To prevent further damage, treat entire lawn.
- DON'T use any other lawn control product for at least one week after application.
- DON'T allow traffic on lawn after application until granules are watered off law foliage and lawn hardened.
- DON'T use on fruit or vegetable plantings.
- DON'T apply with a rotary-type spreader.
