How To Use

- | | |
|--|---|
| <p>DO apply when insect activity or damage (chewed or browned leaves) is first observed in the lawn. For grubs, the most likely period is from late July through early October, the next most likely period is Spring. For mole crickets, the best time to apply is in May or June.</p> <p>DO apply when lawn is dry.</p> <p>DO water lawn after application to wash granules from the lawn foliage. If treating for grubs, water thoroughly (so that active ingredients will be carried into the root-zone).</p> <p>DO make a repeat application of Scotts Lawn Insect Control (with or without fertilizer) if there are signs of renewed insect activity. (Normally, application gives effective control for approximately 6 weeks.)</p> | <p>DO apply at 5-10 lbs. spreader (standard or automatic models) setting (treats 5,000 sq ft) or 6-8 lbs. setting (treats 4,000 sq ft).</p> <p>DO NOT treat just the browned areas of lawn. To prevent further damage, treat entire lawn.</p> <p>DO NOT use any other lawn control product for at least one week after application.</p> <p>DO NOT allow traffic on lawn after application until granules are watered off lawn foliage and lawn has dried.</p> <p>DO NOT use on fruit or vegetable plantings.</p> <p>DO NOT apply with rotary type spreader.</p> |
