crabgrass preventer plus lawn fertilizer

for established lawns

If you are planting grass seed, use Starter Fertilizer with Crabgrass Preventer instead of this product.

Prevents crabgrass-
also barnyardgrass, foxtail, goosegrass

Gives complete feeding of Scotts
long lasting fertilizer.

How To Use

DO apply at regular rate in the *spring* (or late winter) to prevent germination of crabgrass. Apply before the third or fourth mowing of the year... before temperatures are regularly in the 80's.

Apply at Scotts Spreader (Standard or Automatic Model) setting **6** (covers 5,000 sq ft)

or apply in fall (September-November) or in the spring-late winter at heavy rate to prevent barnyardgrass, foxtail and goosegrass

DON'T apply to newly seeded or sodded areas until after the second mowing. On newly sprigged area, wait until the bare areas are filled in.

DON'T rake or aerify after application, to avoid disturbing the Halts barrier in the soil surface. (Rain, snow or freezing weather after application does not affect results.)

DON'T seed, sod or sprig for four growing months after application of this product.

DON'T use this product to control crab-
