- provides systemic disease prevention and control
- provides controlled release nitrogen feeding

Net Weight 39 lbs (1769 kg)

For professional use only. This product is a systemic fungicide and fertilizer. It is used to prevent and control diseases of turfgrass caused by fungi. It also provides a controlled release of nitrogen to feed the grass. It is used on golf courses, lawns, and other areas where turfgrass is grown. It is applied as a top-dressing to the grass. It is used in conjunction with other turf care products. It is not to be used on ornamental plants, shrubs, or trees. It is not to be used on lawns that are heavily shaded or that are in poor condition. It is not to be used on lawns that are heavily infested with weeds. It is not to be used on lawns that are heavily infested with insects. It is not to be used on lawns that are heavily infested with nematodes. It is not to be used on lawns that are heavily infested with other pests. It is not to be used on lawns that are heavily infested with other diseases. It is not to be used on lawns that are heavily infested with other fungi. It is not to be used on lawns that are heavily infested with other bacteria. It is not to be used on lawns that are heavily infested with other viruses. It is not to be used on lawns that are heavily infested with other parasites. It is not to be used on lawns that are heavily infested with other organisms. It is not to be used on lawns that are heavily infested with other life forms. It is not to be used on lawns that are heavily infested with other matter.

Directions for use

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

For use on turfgrass areas consisting of bentgrass, bluegrass, Poa annua or bermudagrass or mixtures where these grasses predominate.

Prevents or arrests these turfgrass diseases: FUSARIUM PATCH (Washington, Oregon and California only), DOLLAR SPOT and BROWN PATCH.

Apply to moist or dry foliage.

For prevention or control of Fusarium patch (in Washington, Oregon and California), dollar spot* and brown patch (light to moderate activity), apply at the RECOMMENDED RATE when disease activity is expected or noted. Repeat at 2-3 week intervals throughout the disease period.

To control severe brown patch infestations, use a non-fertilizer fungicide such as ProTurf Systemic Fungicide to limit the amount of fertilizer applied. Follow with the RECOMMENDED RATE of either product once the disease is controlled.

*If dollar spot control is not

effective following the use of this product as recommended a thiophanate-methyl or benomyl tolerant strain of fungi may be present. Consult your ProTurf Tech Rep. Consideration should be given to prompt use of other suitable ProTurf fungicides.

Storage and disposal

Do not contaminate water, food or feed by storage, disposal or cleaning of equipment. Open dumping is prohibited. Pesticide that cannot be used should be disposed of in a landfill approved for pesticides or buried in a safe place away from water supplies.

Do not reuse empty container. Dispose of in an incinerator or landfill approved for pesticide containers, or bury in a safe place. Consult federal, state or local disposal authorities for approved alternative procedures such as limited open burning.
