### Directions for Use

For crabgrass prevention, apply this product to a well-established lawn in early spring to prevent crabgrass. Apply before March in Southern California and in other states apply in early spring up to the date dandelions have reached full bloom. Apply at Scott's Sprinkle Formula Application Rate of 1/2 lb. (227 g) per 1,000 sq ft.

Do not apply when foliage is moist or dry but it should not be so all as to touch the bottom of the sprayer. Slightly overlap sprayer when it is applied for complete coverage. Do not walk on treated areas until the lawn is dry.

Use Scott's Halts of Crabgrass preventer to control crabgrass and other weeds growing in lawn. Apply as directed on label.

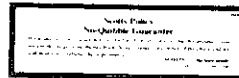

Do not apply after application of other lawn treatments. Do not apply after application of other lawn treatments. Do not apply after application of other lawn treatments.

Do not apply after application of other lawn treatments. Do not apply after application of other lawn treatments. Do not apply after application of other lawn treatments.

Do not apply after application of other lawn treatments. Do not apply after application of other lawn treatments. Do not apply after application of other lawn treatments.

Do not apply after application of other lawn treatments. Do not apply after application of other lawn treatments. Do not apply after application of other lawn treatments.
