Scotts
TURF BUILDER Plus Halts
Crabgrass Preventer plus Lawn Fertilizer

BEST AVAILABLE COPY

The Scotts Difference.

Scotts Patented Particle Technology is available only in Scotts products, so don't be fooled by crabgrass preventers claiming to be "just like Scotts".

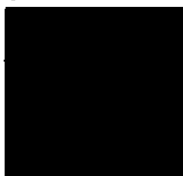

Remember, even crabgrass preventers claiming to contain slow-release nitrogen are typically just simple mixes, so they can't deliver the consistent great results you'll get from Scotts Patented Particle Technology. With Scotts Turf Builder Plus Halts for Lawns, every particle contains timed-release nitrogen, plus the other primary nutrients and crabgrass preventer.

ORDINARY SIMPLE MIXES
• Nutrients and crabgrass preventer granules of many different sizes and shapes.
• Results: granules of unequal size can separate during application.

SCOTTS TECHNOLOGY
• Turf Builder Plus Halts for Lawns granules are consistent in size and shape.
• Results: consistent distribution of nutrients and crabgrass preventer.

ORDINARY SIMPLE MIXES
• The amount of individual nutrient and crabgrass preventer in each square inch of lawn may vary greatly.
• Results: uneven, inconsistent crabgrass prevention and feeding.

SCOTTS TECHNOLOGY
• Turf Builder Plus Halts for Lawns delivers the same ratio of primary nutrients plus crabgrass preventer in every square inch of turf.
• Results: consistent prevention plus better crabgrass prevention.

What to expect

Crabgrass and other weeds listed will be prevented all summer and your lawn will be greener in 4 to 6 days.
Turf Builder Plus Halts for Lawns forms a barrier on the soil

which prevents crabgrass, foxtail, spurge, horseweed, fall panicum, and weeds (common yellow woodruff) from germinating and appearing above ground level. The small, nut-like granules cover your lawn completely to keep these weeds before they start. This means that Turf Builder Plus Halts for Lawns gives your lawn the best season-long crabgrass, foxtail,

and spurge prevention available.

This product does not control dandelions or any other weeds (including crabgrass) that are already established and growing. You can kill growing broadleaf weeds with Scott's 1 and 2 and 3 and 4 weed control plus lawn feeders.

How and when to apply

Apply in early spring.

Directions for use:

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Apply when your lawn is dry. It is not necessary to water it in after application.

Apply in early spring before the third or fourth mowing, or before temperatures are regularly in the 50s. Run, cover, or blowing weather will not affect the performance of this product.

• For Kentucky Bluegrass, fine fescue, tall fescue, perennial ryegrass, or 4 blends of these grasses, apply at the **REGULAR RATE**.

• For bermudagrass, St. Augustinegrass, bahiagrass, seashore paspalum, and blends of these grasses, apply at the **HEAVY RATE**.

Do not use on and for 6 months following application. The crabgrass barrier prevents grass seed from germinating.

Spreading Tips

For best results, use a Scotts spreader.

	Spreader Settings		Directions
	REGULAR RATE covers 18,000 sq. ft.	HEAVY RATE covers 10,000 sq. ft.	
Scotts Drop Spreader	5	5 1/4	Make four rows, apply 3 border strips, apply border down row of lawn, overlapping wheel marks.
Scotts EasyGreen Rotary	26	26 1/2	Make each pass about 10 inches from previous pass to overlap spread width.
Scotts SprayGreen Rotary	4	4 1/2	Make each pass about 5 feet from previous pass to overlap spread width.

Additional Spreader Settings	
Cyclone Rotary (Model B)	3
Control Drop (Model B)	6
Scout Drop (Model B)	5
Circle Drop (Model B)	5 1/2
Green View Drop (Model B)	4
Proton Drop (Model B)	4

(Main Scotts spreader covers 18,000 sq. ft. approximately. You may need to adjust for proper coverage.)
