Treats 4,350 sq. ft. (404m²)

Oftanol Grub Control

Controls white grubs, (Japanese beetle, masked chafer, European chafer), mole crickets, and billbug larvae

(Use Scotts Dazomet Lawn Insect Control, Durshan Lawn Insect Control, or Sevin Lawn Insect Control to control chinch bugs, sod webworms, and other surface insect problems - see list on package.)

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

- For White Grub Control: For optimum results, control grubs in the summer/early fall by applying the product before peak grub feeding activity (June-July in southern states, late July-early August in northern states).
- For Billbug Larvae Control: Apply in early-mid summer prior to the time of maximum larval activity. This is usually during the June-July period.
- For Mole Cricket Control: The best time to treat is during May-July when the crickets have hatched and are still young.
- In order to move the insecticide down to the zone of insect activity, please adhere to the following watering instructions:

Insect	Water
White Grub & Billbug Larvae*	1/2 to 1 inch immediately after application
Mole Cricket	1/2 inch before application, followed by 1/2 to 1 inch after application

*For best results, water your lawn 24 hours prior to application. This will better enable the active ingredient to penetrate the thatch and control the white grubs and billbug larvae.

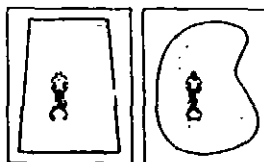

- Do not graze treated areas or use clippings from treated areas for feed or forage.
- Do not allow children or pets on the treated lawn until it has dried.
- Do not use other lawn control products for at least one week after application.
- Do not apply Oftanol Grub Control more than twice annually.

TIPS ON SPREADING WITH SCOTTS SPREADERS

Scotts Drop:

- First apply two header strips.
- Operate spreader the longest way of the lawn.
- Overlap wheels to insure complete insect control.
- Shut off spreader when you have reached the header strips or anytime you stop.
- Mow lawn first if grass is tall enough to touch the bottom of the spreader.

EasyGreen - Rotary:

- Slide shut-off lever to the right. Application automatically starts and stops when you do.
- Avoid misses by making each pass about 50 inches from the previous one so some overlapping occurs.

SpeedyGreen - Rotary:

- Shut off spreader anytime you stop.
- For complete coverage make each pass about five feet from the previous one, so some overlapping occurs. Avoid applying this product on flower, vegetable and shrub plantings.

Subject: Submission of Final
Printed Labels
Grub Control
EPA Reg. No. 538-225

Notification

Gentlemen:

Attached are five (5) copies of final printed labels of the subject product. Please add to the record the following additional brand name:

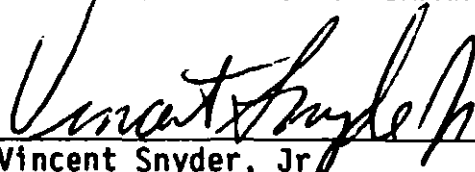

"Oftanol(R) Grub Control"

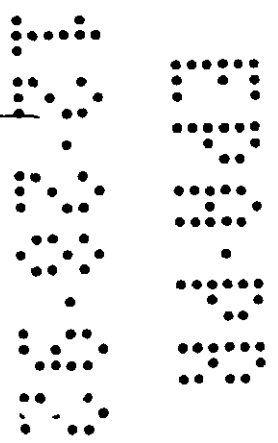

Please be advised that we will be stickering the label to add the "Notice to Physician" statement that was the subject of our December 3, 1992 amendment. This statement, which was made a condition of registration by the Massachusetts Pesticide Council, was not on the package when it was initially printed.

Finally, we will add a statement to "apply 2.3# of product per thousand square feet" at the next printing as this statement was inadvertently omitted from the first printing. Please consider that we inform the consumer that this 10 lb bag treats 4,350 ft² at three different locations on the label. We apologize for this inadvertent omission and will correct it at the next printing.

Respectfully yours,

THE O. M. SCOTT & SONS COMPANY
