U. S. MEASURE

Riley Bros.

DIRECTIONS

FOR MILLWORK

To protect windows, frames, doors, screens and tool handles from dry rot, decay, termites and lyctus beetles, two applications by brush or spray or a minimum three minute dip for all wood to be in contact with the soil. "Penta" Preservatives meets the requirements of the National Door Manufacturers Association.

FOR FENCE POSTS

Fence posts treated with "Penta" Preservative will last 15 years or more, depending upon the kind of wood and how well the treating job is done. The posts should be cut preferably in winter or early spring, peeled and air-seasoned until dry. Then soak the posts, butts downward, in "Penta" Preservative for 24 to 48 hours. Proper treatment will insure lasting protection.

FOR ALL FARM BUILDINGS

Mold, mildew, decay and termite damage in all farm buildings can be controlled by "Penta" Preservative treatment. For protection against termites, the wood should be treated prior to use in construction.

RILEY BROS., Inc.
BURLINGTON, IOWA

USDA REG. No. 548-22

5%

PENTA PRESERVATIVE

A Non-Staining Wood Preservative (AND SOIL POISON FOR TERMITES)

Prevent Rot - Decay - Fungus - Mold Termite and Lyctus Beetle Damage

Active ingredients 100%

Ingredient 5% pentachlorophenol* and 95% Petroleum Hydrocarbons*

*as determined by Federal Specifications TT-W-570.

READY TO USE

DANGER: POISON 

CAUTION — Keep Out Of The Reach of Children — Harmful If Swallowed.

See Caution & Antidote on Side Panel

RILEY BROS., INC.

Burlington, Iowa

TOXIC TO FISH AND WILDLIFE
Do not contaminate water by cleaning equipment or disposal of waste and containers.

POISON: WARNING!

Harmful If
Swallowed

Or Absorbed Through
Skin! Combustible!

Causes skin irritation! Do not breathe vapor or spray mist. Do not get in eyes, on skin, or on clothing. Keep away from heat and open flame. Wash thoroughly after handling and before eating or smoking. Close can after using. If poisoning occurs by swallowing, administer an antidote such as a milk, raw egg white, gruel or corn starch paste. Follow with an emetic to induce vomiting such as a table spoon full of mustard in a glass of warm water, and call a doctor.

Do not reuse empty container. Return to drum reconditioner or destroy by perforating or crushing and burying in a safe place.

**Keep Out Of Reach Of Children
Use With Adequate Ventilation.**

PAINTABILITY

"Penta" Preservative leaves the wood clean, non-bleeding, and paintable. The drying time required before painting varies with the amount of "Penta" Preservative absorbed by the wood, the kind of wood and the drying conditions. For best results, at least 72 hours should be allowed.

Extra Effective Against Termites

By good construction and the proper use of "Penta" Preservative, most of the waste caused by termites can be avoided, easily and inexpensively.

Subterranean termites, by far the most common type, must go back and forth to the soil to obtain moisture. Therefore, the soil should be treated to a sufficient depth about walls and piers, especially those of masonry construction, and about pipes, to cover all possible points of termite entry. The treated barrier should be from eight to twelve inches wide. "Penta" Preservative should be applied to the soil by first digging a trench to a sufficient depth, but in no case deep enough to endanger the foundation support. For buildings with deep foundations, the trench should be 30" in depth with treatment to be 1 gallon per lineal foot for trenches deeper than 15" and 1/2 gallon per lineal foot for trenches less than 15" in depth. Spray or soak the soil and replace dirt, respraying at six-inch intervals as the earth is replaced. Use 2 gallons per 5 cubic feet of soil, or 2 gallons per 5 lineal feet of trench, or 5 square feet of ground surface.

Decayed or termite-attacked wooden sills should be replaced with new ones, "Penta" Preservative treated. Both interior and exterior of the lumber may be sprayed or thoroughly swabbed with "Penta" Preservative.

"Penta" Preservative is extremely poisonous to termites, and its use, which costs very little, will save much larger sums in repair and replacement bills.
