DIRECTIONS FOR USE

Apply at rate of 35 lbs. per acre (2½ lbs. active ingredient per acre).

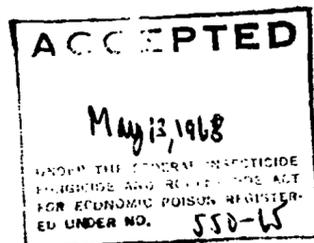

Time of application:

- 1st application at 5% bloom
- 2nd application 8 days later
- 3rd application 8 days later (if needed)

Make applications as soon as possible after each rainy period, but no more than two during any 6-day period and at least one application during each 14-day period. A grower may expect to apply 3-4 sprays during a wet bloom period and 2-3 sprays if the bloom period is dry. No application of fungicide during the harvest period is required. If applied within 3 days of picking, remove residues by washing.

CAUTION:

This product is toxic to fish. Do not contaminate water by cleaning of equipment, or disposal of wastes.

Guardsman THIRAM FUNGICIDE has been formulated to control BOTRYTIS CINEREA, a fungus disease which causes the flower parts of strawberries to become infected during the bloom period. This causes a soft, rotted fruit. In the advanced stages of rot, the causal fungus will produce a gray mold over the surface of the fruit.
