NET CONTENTS

TERMITE CONTROL IN EXISTING STRUCTURES Buildings with Passex, sale or Grow's Spaces

First remove #JLword detris and uood forins. Around plers, pipes, chimney besse and along foundations of poured concrete dig a trench 6 inches wide and 4 inches deep. For tylck and block foundations dig tow trench about 12 inches deep, if footing is more than 12 inches deep, make holes with a crowber, pipe or a not about one foot apart that etend from the trench bottom to the top of the footing. Make holes closer in hard-packed clay soils. NEVER DIG BELOW THE TOP OF THE FOOTING Apply the emulsion (or solution) in the trench at a rate of 4 gallons per 10 linear feet per toot of depth. Apply half of this to the back-fill. Likewise, treat along the inside of foundations of crawf-space buildings. Covertreated soil with a thin layer of untreated soil.

For raised porches, terraces, and entrance state, drill holes at one foot intervals, 6 inches from the foundation and pour one-half gallon of emulsion (or solution) into each hole Refill holes. Slabs with heat ducts or redisting heat pipes should be treated by commercial pest control operator.

The object is to establish a treated soil barrier which will prevent termite entry. Other critical areas may also require treatment, particularly if there are inaccessible areas, basements or stab-type construction. It is suggested that you contact the Agricultural Cooperative Extension Service for advice or consult a Commercial Pest Control Service.

Avoid contamination of public and private water upplies by following these precautions. Do not allow a hose or any type of faucet extension to reach into the termite chemical solution while filling or mixing this material with water. Use anti-back-flow or antisiphonage equipment on all filling equipment. These devices can be purchased at hardware or plumbing supply stores. Use of anti-back-flowequipment will help to insure that the user of this toxic chemical will not contaminate domestic water supplies. Refer to Federal (Federal Housing Administration), state, and loca specifications for safe distances of treatment areas from wells. Soil in the vicinity of wells, claterns or ponds should not be treated if it is water saturated, subject to excessive saturation due to an accumulation of water or if the soil to be treated around the perimeter of the structure is at a grade lower than surrounding yard or property area. If this is the situation treat as follows: Do Not Apply Under Pressure. Soil should be removed to an area safe from well or domestic water contamination. treeted, allowed to stand undisturbed for two to four hours then returned to the trench which has been lined. with 4mil plastic sheeting. Be careful not to puncture the plastic sheeting when returning solito the trench. Do not treet structures that contain claterns or wells.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited.

STORAGE: If container is damaged: Stop any leaks by repositioning the container or by patching or otherwise repairing the leaks. Take care to avoid contact with pesticide and wear protective gear. On cleanup of spilled liquids, wear protective equipment as required to prevent contact with the product or its vapors. Cover the spilled area with generous amounts of absorbent material, such as clay, diatomaceous earth, sand, or sawdust. Sweep the contaminated absorbent on to a shovel and put the sweepings into a salvage drum. Dispose of wastes as below. Do not store, use, pour, or spill near heat or open flame.

<u>PESTICIDE DISPOSAL</u>: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide of Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Mr. Nick Sanchez Prentiss Drug & Chemical Co., Inc. C. B. 2000 Floral Park, NY 11001 345 /122780 17 5

Dear Mr. Sanchez:

Subject: Amendments - Update Formula Statement
Data Call-In Letter Dated February 23, 1984
Prentox Prenchlor 4 lb. Emulsifiable Concentrate
EPA Registration No. 655-516
Your Submission Dated March 6, 1984

The amendment referred to above, submitted in connection with registration under the Federal Insecticide, Fundicide, and Rodenticide Act, is acceptable. The revised formula statement has been added to the product's registration files. It is noted that the solvent has been changed from kerosene to Topar M. No change in the label declaration of Petroleum Distillate is required because of this solvent change.

Sincerely yours,
