1. *Phylogenetic relationships* – The phylogenetic relationships among the 10 species were inferred using the maximum parsimony (MP) method. The MP analysis was performed using the software package PAUP 4.0 (Felsenstein 1999). The heuristic search was performed using 1000 random starting trees. The tree was collapsed using the parsimony criterion. The support for the nodes was assessed using the bootstrap method (1000 replicates). The tree was rooted using the outgroup species, *Phyllanthus* sp.
