DIRECTIONS FOR USE

POTATOES

ROW APPLICATION -- Use 5 gallons per acre mixed in sufficient water to total approximately 20 gallons of finished spray. Spray several points in the planted row to treat all the soil that surrounds and covers the seed piece and tuber forming zone. Two nozzles attached to the planter work best; one fan nozzle ahead of the opening discs; the other nozzle placed above and slightly ahead of the closing discs. Spray pattern should treat a 12 to 14 inch band centered on the row.

BROADCAST APPLICATION -- Use 9 to 12½ gallons per acre mixed with 100 to 150 gallons of water. Apply to the soil surface prior to planting and disc and cross disc to a depth of 4 to 6 inches. A drag harrow is usually attached behind the discs on the last discing. It is very important to thoroughly mix this formulation into the tuber forming zone of the soil. It is desirable to make treatment when the soil is slightly moist.

WARRANTY AND LIMITATION OF DAMAGES. AGSCO CHEMICALS, INC warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance to the Directions for Use. AGSCO CHEMICALS, INC makes no other express or implied warranty, including any other express or implied warranty of fitness or of Merchantability, and no agent of AGSCO CHEMICALS, INC is authorized to do so except in writing with specific reference to this warranty.
