DIRECTIONS

AGSCO 666 is a selective herbicide for the control of susceptible weeds in small grains and cereals and for control of certain deep-rooted perennials and woody plants in corn and sorghum. For best results, apply when climatic conditions are favorable for the growth of weeds.

WEEDS CONTROLLED: Mustard, Frenchweed, Arrowweed, Dandelion, Chicklegum, Sunweed, Milk Thistle, Hedge Poinsett, Poplar, Ragwort, Wild Buckwheat, Fountain, and other broad-leaved weeds.

WHEAT, BARLEY, RYE Use 1 to 2 pints of this herbicide per acre in sufficient water for good coverage. It is recommended that the lower dosage be used for more susceptible weeds such as common mustard, and the higher dosage level may be necessary for the control of more resistant weeds such as Canada thistle. Make application only between the shooting and boot stages.

NOTICE Do not graze or graze in treated grain fields within 2 to 3 weeks after treatment. Do not feed treated corn to livestock.

CORN Use 1 to 2 pints of this herbicide per acre in sufficient water for good coverage. Make application following emergence of majority of weeds but before weeds have damaged the corn. Post-emergence application of this herbicide should be made after emergence but before tasseling. Do not apply from tasseling to dough stage. Use drip nozzles when corn is over 6 inches high. Stir and suspend. Corn yields in treated areas are 2-4% and particular care should be given to avoid a leaf burn injury.

DEEP ROOTED PERENNIALS AND WOODY PLANTS In areas such as drainage ditch banks, highway right of ways and fence rows, use 1 to 2 pints of this herbicide per acre in sufficient water to insure good coverage. In the control of plants such as willows and poison oak, it is necessary to have thorough coverage. Certain weeds and woody plants will form new growth after treatment and repeat application may be necessary.

U.S. PAT. 2,811,100 AND CAN. PAT. 611,150
