**MONEY BACK GUARANTEE**

You must be pleased with results or you are entitled to your money back. Simply send sales slip to Vigoro, Box 68, 60690 for prompt refund.

**EASY TO USE**

APPLY IN LATE WINTER OR EARLY SPRING

Kills the crabgrass seedlings just as they are sprouting from the seed, but not after growth has begun, so get it on early!

- Apply contents of this bag to 2000 sq. ft. — no more!
- It is essential to apply very evenly with no skips or misses. Set your spreader according to the chart below, then cover the area twice, the second time at right angles to the first.
- Do not rake the lawn or disturb soil surface after application.
- Water in lightly if no rain falls within a week after application.
- Do not use on dichondra lawns.
- On lawns newly seeded in the spring wait until after third mowing.

**WHAT ABOUT RESEEDING?**

- Crabgrass controls affect the germination of lawn grasses, so if you can't wait until the best time (fall) to reseed, do it by one of these methods:
- 1. Seed early enough in the spring so that young grass can be mowed three times before applying **Rid**.
- 2. Cover large bare spots with 1/2 inch of crabgrass-free topsoil after applying **Rid** to lawn, then sow seed, tamping it into the fresh soil.

**CAUTION:** Harmful if swallowed. Do not take internally. Avoid contact with skin, eyes, and clothing. Wash after handling or using. Store in a dry place. Do not reuse container. Destroy when empty.

Some thinning of fescue grasses has been occasionally observed. Do not contaminate feed or foodstuffs.

Manufactured by Swift Agricultural Chemicals Corporation
