EFFECTIVE TWO WAY ACTION:

In a single application, Deep Green Vigoro Lawn Food With Rid gives positive pre-emergent crabgrass control and feeds your lawn.

RESEEDING:

All crabgrass controls that are really effective will affect the germination of lawn grasses, so if it is necessary to reseed large bare spots either (1) do so early enough so young grass can be mowed once before applying, or (2) cover large bare spots with 1/2 inch of crabgrass-free top soil after applying, then sow seed, tamping it into the fresh soil.

HOW TO USE: Apply in late Winter or early Spring before crabgrass germinates.

Deep Green Vigoro With Rid kills crabgrass as it germinates, not after growth has started. This bag covers 2500 sq. ft., no more. Apply on a calm day to avoid wind drift. Set your spreader according to the chart below, then cover the area twice, the second time at right angles to the first to insure thorough coverage. Do not rake lawn or disturb soil surface after application. If no rain falls within a week after application, water lightly to bring Deep Green Vigoro Lawn Food With Rid in contact with the soil. DO NOT APPLY TO DICHONDRA LAWNS. On lawns newly seeded in spring, wait until after mowing once to apply. Some thinning of fescues has been observed occasionally.

HOW TO SET YOUR SPREADER

(Settings may vary with age, model, and condition of spreader.
Check your spreader by trial over a known area.) One bag covers
2500 sq. ft.

(Settings to follow)

CAUTION

Harmful if swallowed. Do not take internally. Avoid contact with skin, eyes, and clothing. Wash after handling or using. Do not contaminate feed or foodstuffs. Store in a dry place.
